Preface
Omar Imady

In this issue of Syria Studies, three contributions are included: Syria and the Great Powers (1946-1958): How Western Power Politics Pushed the Country Toward the Soviet Union by Jörg Michael Dostal, UK National Print Media Coverage of Sexual and Gender-Based Violence (SGBV) against Refugee Women in Syrian Refugee Camps by Özlem Özdemir, and a review of the memoirs of Badr Deen Challah.

In, Syria and the Great Powers (1946-1958): How Western Power Politics Pushed the Country Toward the Soviet Union, Dostal shares a convincing analysis of just how systematic was the failure of Western powers to embrace a Syria that was willing and eager to be aligned with the West. France, the UK and the US all are equally guilty of this. Everything they do, and don’t do, is either too late or seemingly designed to convey to Syria’s leaders that for reasons, mostly involving Israel, they are simply not willing to provide what it takes to safeguard a democratic inclusive Syria that is supported militarily by the West. In this sense, Dostal shows that Syria’s ultimate decision to align itself with the Soviet Union was not based on ideological grounds, but rather on Western rejection. Ironically, the West complains about the very harvest it had planted and works overtly and covertly to undermine Syria’s alliance with the Soviet Union – the very alliance that would have not taken place had it not been for its own policies. In this sense, and as Dostal eloquently states, Western policies “set the scene for the existential challenges the Syrian people face today.” Perhaps, Dostal would agree that Western interaction with Syria’s crisis since 2011 (again too little too late and systematically flawed) may have laid the foundations for the Russian dramatic intervention we have witnessed over the last few months.

In, UK National Print Media Coverage of Sexual and Gender-Based Violence (SGBV) against Refugee Women in Syrian Refugee Camps, Özdemir explores yet another tragic consequence of Syria’s crisis; namely, the various forms of sexual and gender-based violence which take place in refugee camps, and documents five different forms of sexual violence: rape, sexual assault/abuse, sexual exploitation, sexual harassment, and forced prostitution. She further shows that in many cases these various forms of sexual violence are in fact inter-related. A father may be willing to marry off his young daughter to an older man precisely because he is afraid that she will be sexually harassed or raped. Özdemir’s focus, however, is not so much on the types of abuse taking place at the camps, but rather on the inexplicable neglect of Western media in general and UK media in particular of a phenomenon that has been thoroughly documented in reports by the UN and independent parties. UK media seems to be far more consumed by ISIS and its actions than to focus on a human tragedy which does not involve a sensational evil party.

Finally, this issue of Syria Studies ends with a review of a memoir by Badr Deen Challah, a prominent Syrian merchant, who is generally regarded as the man who forged an alliance between Syria’s Sunni merchants and the regime of Hafez al-Asad. The memoirs, which were published in Arabic in 1990 provide students of Syria’s recent history with a goldmine of insights and information that are yet to be fully understood and utilised.
1

Jörg Michael Dostal
Abstract

This paper reconstructs the political history of the Syrian Arab Republic from the time of the country's emergence as an independent state in 1946 to the merger with Egypt to form the United Arab Republic in 1958. Two main sources of documentary evidence are brought to add to this analysis: firstly, declassified British government sources are utilized; secondly, the Stockholm International Peace Research Institute (SIPRI) database on arms exports to the Middle East is used to back up the descriptive analysis of Western strategic interests in the Middle East during the early Cold War period with some relevant quantitative data.

From the beginning, Syria faced geopolitical challenges, which worked to undermine the country's political stability. Apart from intra-Arab conflicts and the issue of Zionist colonization in Palestine, Syria quickly developed into a focal point of the Cold War between the Western powers and the Soviet Union. This was due to the refusal of the United Kingdom (UK) and United States (US) governments to support Syria's statehood in economic and military terms. The Western rejection of substantial assistance to Syria, largely motivated by efforts to back up Israel and fully unrelated to the question of whether or not Syria was governed by democratic or authoritarian rulers, explains the country’s shift toward the Soviet Union in the mid-1950s.

Next, UK and US attempts to unseat Syrian governments through covert action (especially in 1949 and 1956-1957) are examined. It is shown that these events pushed Syria’s leaders to opt for merger with Nasser's Egypt and military assistance from the Soviet Union in order to avoid further destabilization. The paper concludes that Western failure to welcome Syria as an independent actor in the Middle East, which was due to the existence of previous strategic alignment with competing states in the region, opened the door for the Soviet Union to emerge as the long-term patron of the Syrian state.

1. From the French Mandate to Syrian independence

In 1916, the Entente powers Britain and France signed the Sykes-Picot Agreement, named after a British politician and a French diplomat. This secret agreement provided for the division of the Levant region (also referred to as the Bilad al-Sham or historical administrative unit of Syria under the Ottomans) between the two powers in the event of a defeat of the Ottoman Empire. Following their victory in World War 1, Britain and France dismantled the Ottoman Empire. The Levant became divided into a southern British and a northern French zone of influence. This partition of the historical Bilad al-Sham produced four new territorial entities of Palestine, Jordan, Lebanon, and Syria. The former two entities of Palestine and Jordan – now separated by a British imposed borderline along the Jordan River – were handed over to Britain as League of Nations Mandates. In turn, France received two League of Nations Mandates for Lebanon and Syria. In this context, the patronage of the League of Nations served mostly to cover up the fact that the four new Mandate entities were in reality controlled by British and French colonial administrators acting under the notion that the local population lacked in political maturity to allow for independent statehood.

The French subsequently organized their rule in the northern Levant by parceling off ‘Greater Lebanon’ from the Bilad al-Sham. The ‘Greater Lebanon’ entity, put in place in 1922, came to contain the Maronite Christian areas – traditionally closely linked to France – but also incorporated Shia-settled territory to the south and Sunni and Druze-settled regions to the east of Mount Lebanon. This redrafting created a numerical balance between different sects in the new state entity (Seale 2010: 117, 165-168). It also meant that what remained of Syria after the division was territorially much diminished in comparison to the Bilad al-Sham. Next, the French further subdivided Syria into smaller districts (or cantons) that were created in order to allow for privileged relationships with local ethnic and religious minorities. It was expected that the minorities would turn into loyal French proxies serving to impose an effective system of divide-and-rule in order to control the Sunni Muslim majority. In terms of military control, the French established the Troupes Spécials that were recruited from the minority populations of the Druze, Christians, Circassians, and Alawites. The majority population of Sunni Muslims was by contrast excluded from joining the French-controlled armed forces. After independence in
1946, the overrepresentation of minorities in the Syrian army leadership remained in place as an artefact of earlier French designs.

This French concern with a balance of power between local forces – in the sense of making them control each other – explains the further subdivision of the Syrian Mandate into Alawite, Druze, Northern (Aleppo-centered), and Southern (Damascus-centered) ‘states’ (Fildis 2011: 134-135). Efforts to permanently establish these entities failed, however. Instead, the French soon experienced a series of rebellions against their rule, most prominently the Great Syrian Revolt of 1925-1927, which originated in the Druze region and subsequently expanded to other parts of Syria before the French were able to repress it. Another conflict emerged due to the French decision to hand over the Sanjak of Alexandretta (the northern coastal area of the Syrian Mandate) to Turkey in 1938. Although this decision was illegal under League of Nations statutes, forbidding Mandate powers to cede territory to other states, it was imposed by the French in order to improve relations with Kemalist Turkey prior to World War 2. The cessation of Alexandretta subsequently forced a large share of the local Armenian and Arab population to flee to other regions of the Syrian Mandate.

In the context of the contested Mandate, the last opportunity to peacefully resolve the conflict between the French authorities and the Syrian nationalist leaders could have been the ‘Franco-Syrian Treaty’ that was negotiated and signed in Paris on 9 September 1936 under the French Popular Front government. The Treaty held that Syria would be granted full independence after a three-year probation period. It also provided for a twenty-five-year agreement of friendship and alliance between France and Syria that included a French military mission, paid for by Syrian sources, to train the Syrian army after independence (Seale 2010: 342-350). However, Leon Blum’s Popular Front government lost office in June of 1937 and subsequent French governments refused to ratify the Treaty. As a result of this failure to reach a mutually agreed settlement to end the Mandate in a peaceful manner, relationships between France and Syrian nationalist leaders broke down, never to recover. In this context, it should be noted that US observers were already highly critical of French predominance in the Levant. Commenting on the Franco-Syrian Treaty, the US Secretary of State, Cordell Hull, stated on 14 October 1936 the view of the US government: ‘We have no desire to urge the local governments to sign or conclude an agreement of any type with the French. We would even refuse to approve a treaty giving
discriminatory privileges to France or French nationals’ (Hull, quoted in Sachar 1973: 314, emphasis in the original).

The start of World War 2 dramatically weakened the French position in the Levant. Early in the conflict, US President Franklin D. Roosevelt put forward a concept for a future bilateral regional division of interests between Britain and the US in the Middle East, which excluded France as a regional stakeholder. He subsequently strengthened the US bargaining position in setting up the close alliance between the US administration and the Saudi King Ibn Saud, which was concluded at the end of WW2 and granted US oil companies exclusive access to the largest oil reserves in the Middle East. For US diplomats of the period, the agreement constituted ‘a stupendous source of strategic power, and one of the greatest material prizes in world history’ (Merriam, quoted in Gendzier 2011, footnote 3).

The US President summed up his own thinking on the Greater Middle East in a statement to the British ambassador in Washington, Lord Halifax, as follows: ‘Persian oil is yours. We share the oil of Iraq and Kuwait. As for Saudi Arabian oil, it is ours’ (Roosevelt, quoted in Yergin, 1991: 40). In a similar vein, France played only a limited role in the planning process for the United Nations (UN) system that was expected to provide the framework of the post-WW2 political order. In this context, Roosevelt put forward his idea of the ‘Four Policemen’ suggesting that the US, Britain, the Soviet Union, and [nationalist] China should jointly provide geopolitical pillars of a future multilateral world order. Thus, his willingness to ignore French and especially Gaullist geopolitical claims was clearly visible to observers (Hoopes and Brinkley 1997: 100-101).

For his part, Charles de Gaulle, the leader of the Free French forces, was convinced that Britain secretly planned to take over the French stakes in the Levant region. He did not trust the assurances issued by the British Minister for the Middle East, Oliver Lyttelton, who stated in 1945 that ‘France should have the predominant position in Syria and the Lebanon over any other European Power’ (Lyttelton, quoted in Hourani 1946: 245). In reality, British projects to exclude France from the region were already in place; they aimed to link a British-guided partition of Palestine – in order to allow for the creation of the planned Jewish state – with schemes to create a Greater Syria based on the unification of Hashemite Jordan, French-administered Syria, the Arab remainder of Palestine, and Lebanon. Such British plans were frequently revised during the course of WW2. Over time, the traditional reliance on the British Hashemite clients in Jordan and Iraq was downgraded.
Instead, potential new alliances with Arab nationalist leaders in Lebanon and Syria as well as Egyptian and Saudi leaders were contemplated (Thomas 2000: 76-78, 83, 88).

The British regional strategy was resented by de Gaulle who was keen to block any British gains at French expense and/or the emergence of an Anglo-American coalition against France in the region. In fact, de Gaulle continued to aspire to influence the economic, military, and cultural fields in Lebanon and Syria. His plans would have included military bases and the continuing French control of the Troupes Spéciales – goals that were by then unacceptable to Arab and Syrian nationalist opinion.

Thus, French attempts to restore control of Syria by military means after the conclusion of WW2 in Europe, such as the French bombardment of Damascus and other Syrian cities on 29 and 30 May 1945, only served to demonstrate France’s isolation in the face of local Syrian, regional Arab, and global public opinion. Since the French military campaign in Syria coincided with the San Francisco Conference, which took place from April to June of 1945 to set up the UN system, the Anglo-American leaders had to condemn French military unilateralism in strong terms. The British Prime Minister, Winston Churchill, demanded immediate French withdrawal ‘in order to avoid collision between British and French forces’ (Hoopes and Brinkley 1997: 201). Subsequently, British troops intervened in Syria on 1 June 1945 with the previous approval of US President Truman. This move once again highlighted French isolation and was soon followed by the British takeover of the local police force and British supply of light arms to the nascent Syrian and Lebanese armies.

These actions, previously agreed with the US State Department (Foreign Relations of the United States, 16 February 1945: 1044-1046), were intended to prepare Syrian and Lebanese armed forces to take over after independence. At the same time, the French Troupes Spéciales suffered large-scale desertions to the Syrian national government – an event recorded in Syrian nationalist historiography as the foundation of the independent Syrian army in 1945, which preceded the country’s political independence in 1946. In a last ditch effort, de Gaulle started to advocate for an international conference on the future of the Levant. He hoped to strengthen the French position by appealing to potential new regional stakeholders in the Middle East, such as the Soviet Union and nationalist China, in order to balance against the Anglo-American alliance (Melki 1997: 101). Not surprisingly, his idea to invite the Soviet Union to participate in negotiations about the future of the region was immediately rejected by the Anglo-American coalition. Moreover, Soviet
geopolitical objectives at this point in time – directly after the conclusion of WW2 and
before the outbreak of early Cold War clashes – were mostly focused on the Turkish
Straits, Azerbaijan, and northern Iran rather than the Levant (Thomas 2000: 84). Thus,
de Gaulle ultimately failed in his efforts to maintain the French position in the Levant.

Following the evacuation of the last French troops from Syria on 15 April 1946, the
country became independent on 17 April. Overall, the balance sheet of the Mandate period
was negative: the French had failed to penetrate Syrian society as the ‘Mandate from first
to last was unwanted and resented by the native population themselves’ providing France
‘with the barest minimum of prestige and even less material advantage’ (Sachar 1973:
332). The French failure to maintain a bargaining position in Syria, let alone to establish a
close relationship with the Syrian elites, was underlined after independence. The first
President of independent Syria, Shukri Quwatli, quickly removed all traces of French
influence in the Syrian education system and advanced a policy of linguistic Arabization.
Moreover, the country withdrew from the franc currency bloc, thereby delinking the Syrian
currency from French regional economic objectives (Sachar 1973: 331). Western
diplomatic dispatches of the period frequently used the term ‘xenophobic’ to describe
Quwatli’s government: the new regime acted in a nativist and inward-looking manner, and
efforts to establish a treaty-based system of political relations between France and Syria
were by now rejected by Syria’s leadership.

In domestic politics, Quwatli’s government amounted to a conservative regime with
a narrow social base derived from traditional notables and the landowning oligarchy.
Because of this, the country’s regional alliances soon began to overlap with the personal
and business relationships of Quwatli and focused in particular on the Saudi and Egyptian
Kings. Crucially, the Syrian government took the initiative to invite the United States to
send a military mission to train the armed forces of the newly independent country. This
decision made Syria the first country in the Arab-speaking world to do so. However, the
US rejected Syria’s request after careful deliberation since US alignment with Zionist
objectives had already started to dominate US regional strategy at this time (Foreign
Relations of the United States, 6 November 1945: 1209-1213).¹

¹ One key statement, pointing to the US balancing act between different potential allies in the Middle
East region, suggested that ‘if the United States should throw its full support to the Zionist program in
Palestine, the resulting atmosphere in Syria would without doubt make the success of the mission an
impossibility’ (ibid.: 1213, footnote omitted). Subsequent Syrian government requests for military
missions from neutral Switzerland and Sweden were equally rejected.
At the time of independence, Syria no longer had any natural geopolitical patron and therefore became ‘the only country in the Arab-speaking world without some sort of Great Power prop’ (Melki 1997: 103-104). With the advantage of hindsight, it is clear that the failure to prepare an ‘imperial succession’ for Syria – due to the urgent Anglo-American interest to remove France as a serious regional contender – had already set the stage for the country’s subsequent trajectory away from the Western geopolitical zone of influence. Moreover, the subsequent French decision to become the first military patron of Israel further confirmed to Syrian state and military elites that the country had to rely on its own resources. Thus, Syria’s policymaking during the Quwatli period became defined by a pragmatic neutralist position based on a proclaimed disinterest in the emerging agenda of the Cold War. While there were already some contacts with the Soviets and their proxies – such as a 1947 Czech arms deal that resulted in some small arms deliveries to the Syrian army – these contacts were not yet politically significant. In fact, Syria’s leadership did not adopt explicitly anti-Western policies until the mid-1950s.

In conclusion, Anglo-American policymaking during the immediate post-independence period failed to integrate Syria into a new regional security structure. The underlying reason for the absence of a coherent Syria policy was that the US already focused on alliances with Saudi Arabia and Israel while the UK was already committed to Syria’s Hashemite Arab neighbors Jordan and Iraq. By way of geopolitical accident, the French Mandate territory of Syria remained therefore outside of the regional structure of Anglo-American client states. The next section further analyzes Syria’s role in the context of the regional Arab and global geopolitical framework.

2. The regional Arab state system after WW2
The development of the Arab state system followed a different trajectory in comparison to the earlier emergence of powerful European states and the United States. While the European states and the US emerged over longer periods of time based on wars of conquest and the forced unification of smaller into larger state entities, this process was blocked in the Arab world due to Ottoman rule and the rising influence of European colonialism (Lustick 1997). Due to this dual system of domination, modern Arab nationalism emerged in a delayed fashion in the late 19th and early 20th century. It only took off as a political mass movement in reaction to the breakup of the Ottoman Empire
after WW1 and the Western powers subsequent imposition of their direct authority over
the Arab world. In their effort to unite the Arabs, the nationalist leaders stressed that
outsiders had controlled the Arab world through a strategy of ‘divide-and-rule’. In doing
so, they were themselves in danger of overstating the case for ‘one indivisible Arab nation’
(the famous slogan advanced by the Baath Party founders Michel Aflaq and Salah al-Din
Bitar). In proclaiming the unity of the Arabs, the question of who belonged culturally and
politically to this ‘nation’ and where the territorial boundaries of Arabism should be drawn
was bound to emerge.²

From the beginning, Arab nationalists faced the problem of how to develop an
inclusive and comprehensive understanding of their own movement in its relationship with
other sources of collective regional identity such as religion, sect, tribe, or linguistic and
ethnic characteristics. Without further discussing these issues here, one needs to stress that
outside interferences in the Arab world – such as the colonial imposition of boundaries by
Britain and France in the Levant and on the Arab peninsula – remain a crucial explanatory
factor for the comparative weakness of the Arabs as political actors in modern times.
However, one should not overstate this element of outside interference, significant as it is,
at the cost of neglecting the Arab elites own agency in maintaining internal divisions.

Turning now to Syria’s situation after independence in 1946, the country emerged
as part of a new post-WW2 regional Arab state system in the Levant and on the Arab
peninsula. This system was characterized by the absence of a regional hegemon and
consisted in the main of five states, namely the two branches of the British-backed
Hashemite monarchies in Jordan and Iraq, the newly independent Lebanon and Syria, and
Saudi Arabia. In addition, Egypt belonged to this system as an important ‘out-of-area’
neighboring state that differed from the five other states due to its long pre-modern history
of independent statehood. Saudi Arabia was also a special case since it had been created in
the 1920s by a war of conquest against the Jordan-based branch of the Hashemites uniting
large shares of the Arab peninsula under the leadership of the Saud family. By contrast, the
borders of the other four states had been drafted under the British and French Sykes-Picot
Agreement of 1916 and its subsequent adaptations (Pursley 2015). These four entities were

² For example, the symbol of the Syrian Baath Party displays a map of the ‘Arab nation’ visualized in
green color. This ‘nation’ reaches from Mauretania on the West African coast via all coastal Maghreb
states toward the Arab peninsula and includes pre-division Sudan. This clearly raises questions about
how Arab nationalism relates to other, potentially challenging nationalisms and group identities.
'territorial’ or ‘state nations’ with rather shallow roots and differed fundamentally from the late 19th century European model of ethnic nationalism (Breuilly 1993).³

It soon became apparent that the new Arab ‘state nations’ jointly faced a number of challenges. First, they were initially unable to act like modern states since they all lacked an effective domestic administrative and economic system. Second, they commanded only weak loyalty from citizens since state nationalism and the concept of citizenship had to compete with older and more established forms of belonging and collective identity at the level below and above the Arab state entities such as kinship, sect, religion, and tribe. Third, modern Arab nationalists frequently emphasized primary allegiance to pan-Arabism rather than loyalty to individual Arab states; indeed it has been stressed that ‘[t]he claim that the Arab state is a territorial state and not a nation state is based on the assumption that it is part of a wider Arab nation’ (Kienle 1990: 17).

Yet despite these and other challenges, the regional system of Arab states proved to be remarkably stable in the second half of the 20th century. Fairly recently, it was still being suggested that ‘[f]or all its upheavals, the Middle East is a region of stable state entities’ (Halliday 2005: 75). In fact, this conundrum of weak Arab ‘state nations’ existing in a (relatively) stable regional state system requires further analysis. First of all, these contradictory features must be scrutinized in a critical manner in order to avoid oversimplification. On the one hand, Arab ‘state nations’ have over time acquired more features of modern statehood, although one might still question whether or not this has increased the stability of individual states. On the other hand, the regional Arab state system has never been stable in any endogenous manner. In fact, it would probably have suffered collapse without the regular intervention of Western powers and the Soviet Union policing the system from outside. Finally, and modernization notwithstanding, many Arab states continued to suffer from a narrow economic base and relied mostly on income from oil and other mineral wealth rather than domestic industrialization efforts. Thus, the Arab oil states became closely linked with the core OECD economies since a major share of their oil rent was reinvested in the economies of advanced countries or spent unproductively on arms and domestic national security states (Hinnebusch 2012).

³In fact, most postcolonial ‘state nations’ in Africa and Asia display characteristics of a ‘delayed’ or weak nationalism, and ethnic and sectarian divisions undermine state cohesion in Syria and the neighboring polities of Lebanon, Jordan, and Iraq.
As a consequence, the Arab state system quickly developed into one of the main sites of geopolitical competition between the two superpowers in the Cold War period (Hiro 1982: ch. 12-13). When Gamal Abdel Nasser’s Egypt started to challenge the status quo in the Arab world from the mid-1950s onwards, the Western powers immediately engaged in counter interventions to stop him. It was only the British military operation in Jordan against indigenous Jordanian supporters of Nasser in 1957 and the military intervention of the US in Lebanon against local Nasserists in 1958 that defended the rule of the Jordanian King and the then pro-American Lebanese President, respectively (Hiro 1982: 319-320; Blackwell 2009: 187). In summary, the survival of the deeply fragmented and weak states of Jordan and Lebanon was to a large extent due to the interference of the Western powers in their domestic affairs. This must be understood as part of a broader Western interest in maintaining the imposed colonial borders and territorial states in the region (Maninger 2013: 302, 306).

Moreover, regional factors are equally significant to explain the survival of the Arab state system, and alliances and conflicts between such states must be interpreted in terms of the search for ‘anti-hegemonic equilibria within this system’ (Kienle 1990: 27). However, such efforts to counterbalance against challenges to the regional status quo tended to bring in external actors, which in turn made it more difficult to reestablish the regional balance.4 In the end, nearly all of the intra-Arab challenges to the regional status quo failed, since hidden warfare and the clandestine funding of local proxies could not make up for the lack of a strong local support base (Rathmell 1995: ch. 6). No Arab country succeeded in efforts to permanently take over another one. Thus, Nasser’s project of union between Egypt and Syria, as implemented during the United Arab Republic between 1958 and 1961, was only possible due to fear on the part of Syrian actors in the Baath Party and elsewhere to fall victim to domestic challenges from a US-backed right-wing coup in Syria in line with similar US and UK interventions in neighboring Jordan (Brown 2013: 21-23; Little 1990). Yet the United Arab Republic also broke up when it became apparent to Syrian policymakers that the country’s political life had simply been

---

4 Some important events cannot be explained by intra-Arab competition or Western intervention but were due to domestic factors. In particular, the Iraqi revolution of 1958 was domestically-driven, produced the full-scale destruction of the British-backed Hashemite regime, and challenged the structural power of Western states in the Arab world. The Iraqi events were certainly more dramatic in comparison to the step-by-step decline of the Western powers’ influence in Syria between 1946 and 1956.
taken over by Egyptian administrators, thereby disenfranchising all Syrian actors independent from their political affiliation. In the end, Nasser’s short-term success in challenging the status quo could not be sustained.

In conclusion, the Nasserist and Baathist variations of Arab nationalism ultimately failed to act as effective unifying forces in the Arab world. While this defeat was to some extent due to outside interventions into Arab affairs, the main reason was that the regional Arab state system, imposed by the Western colonial powers, divided even the most committed Arab nationalists into factions that competed with each other. Thus, Arab nationalism became intimately linked with existing territorial Arab states and depended for political survival on the effective control of material and ideological resources that only states could provide (Chaitani 2007: 164; Kienle 1990: 50). This is not to deny Arab nationalism a significant historical role; rather one needs to account for the fact that the abstract commitment to ‘unity of the Arab nation’ proceeded in practice alongside the reinforcement of the existing Arab state system (Owen 1992: 85, 89). In the next section, Syria’s political development from independence in 1946 to the rise of Nasserist and Soviet influence in 1956 is discussed, focusing in turn on global, regional Arab, and local Syrian factors and how they influenced the course of events.

3. From independence to the rise of Nasserism & Soviet influence (1946-1956)

When Syria became independent in 1946, the country’s new leadership could not imagine how geopolitical factors associated with the Cold War, the challenge of Zionism, and intra-Arab conflicts would all contribute to the country’s political instability and weak statehood. In fact, there was hardly any time to learn new lessons in the short period between 1946 and 1949, when the military coup of Colonel Husni Zaim, the chief of staff of the Syrian army, ended constitutional government in Syria. From the very start, independent Syria was forced to confront major challenges. In 1947 and 1948, the failure of the combined Arab armies to prevent the expulsion of Arabs from Palestine resulted in the establishment of Israel in 1948. This traumatic experience of defeat, shared by all Arabs, and the subsequent failure to effectively coordinate the Arab states’ regional response to Zionism triggered new demands for Arab unity in general and the immediate merger of Arab states in particular.

For many Syrians, it was therefore unclear whether Syrian statehood would be anything more than a transitional stage toward some larger Arab (or at least larger Syrian)
polity. At this point in time, reference to the *Bilad al-Sham* of Ottoman times was still a natural way of considering regional politics and the loss of Syrian territory during the French Mandate (the French decision to hand over the Sanjak of Alexandretta to Turkey in 1938) was still a recent event. Moreover, the separation of Syria from the Lebanese ports and trade routes, due to Lebanese independence in 1943, appeared to many Syrian actors as another artificial imposition deriving from the illegitimate French Mandate (Seale 2010: 612-614). In sum, the unclear geographical identity of Syria amounted to a significant foundational burden and questioned the country’s economic and political viability.

Additional domestic challenges derived from the underdeveloped political system and the shallow roots of Syria’s statehood in society. In particular, the new Syrian government under the Presidency of Shukri Quwatli was little more than a club of the traditional economic elites representing the large landowners and Sunni trading bourgeoisie of Damascus and, to a lesser extent, Aleppo. In this context, the two-party system at the time of independence consisted of the Damascus-based National Party (Quwatli’s party) and the Aleppo-based People’s Party (in English-language sources also referred to as Popular or Populist Party). In fact, both of these parties were neither connected with popular sectors nor based on political programs beyond loyalty to traditional leaders and influential families.

As a result of Syria’s weak national identity, shallow statehood, and underdeveloped political system, neighboring Arab states were keen to put forward ‘Arab unity’ schemes serving their own objectives. In fact, each of these schemes would have resulted in the takeover of Syria by another Arab state. The two most likely scenarios at that time were the so-called ‘Greater Syria’ scheme (unification of Syria with Jordan under the King representing one branch of the Hashemite family) or, alternatively, the so-called ‘Fertile Crescent’ scheme (unification of Syria with Iraq which was at the time notionally governed by a regent acting for another branch of the Hashemite family, but was essentially controlled by British advisors). In order to avoid these two possible unity schemes at the cost of Syrian statehood, Quwatli relied on his good personal relationship with the Saudi King who had conquered his Kingdom from the Hashemites in the 1920s and was therefore willing to back up Syrian independence in order to avoid a strengthening of Hashemite regional influence.

Yet, the survival of the Syrian state as an independent entity was at this early stage still open to questioning. Rather than being influential in its own right, Syria essentially
gained regional influence as a ‘swing state’ by backing up the hegemonic ambitions of one of the more powerful Arab countries, namely Egypt, Iraq, or Saudi Arabia (Yaqub 2004: 36). In short, Syria was too strong to be ignored in competition for regional hegemony and too weak to be a credible contender for regional leadership in its own right.

In order to look more systematically at Syria’s position after independence, the current section adopts a three-level analysis focusing in turn on domestic, regional, and global factors. In fact, the interrelationship between the three levels is crucial to explain the Syrian case in a convincing manner. To begin with, one must consider Syria’s ‘long year’ (1949) in which three military coups highlighted the country’s weak statehood and vulnerability to internal and external power contests. Patrick Seale’s classic account of early Syrian statehood, the monograph The Struggle for Syria (1965), not bypassed by latter-day scholarship, can by now be backed up by the ‘official-unofficial record’ (Dan Atkinson) of secret diplomatic dispatches of the Western powers, especially the British records on Syria that have been published in the mid-2000s (Records of Syria 2005).

To recapitulate the generally known facts, Syrian society experienced in the late 1940s and early 1950s the rise of new popular parties such as the Arab Socialist Baath Party, the Syrian Communist Party (SCP), and the Syrian Social Nationalist Party (SSNP). This emergence of new ‘ideological’ parties took place in parallel with the rise in significance of the domestic political role of the Syrian army and especially the army’s officer corps as a new alternative power center. Both of these developments opened new channels for the social advancement of lower socioeconomic groups at the expense of the traditional Syrian elites. In this context, it is significant to note that the Syrian army, as the new core institution to back up domestic political power, diverged from the other Arab armies of the late 1940s and early 1950s. This was due to the absence of a ‘natural’ geopolitical patron that could have linked the armed forces with external sponsorship and patronage.

On the one hand, the three potentially relevant Western powers, the US, the UK, and France were aware that effective coordination of their respective policies on Syria would have added to their bargaining power in dealings with Syrian actors such as the

---

5 The current paper takes account of the opening of the British sources as far as they were published in the 2005 collection (this resource appears to have been underutilized since its publication). As for US sources, CIA files are usually declassified after a delay of fifty years or more. This process appears to offer some assurance about the ultimate transparency of US covert actions. However, declassified CIA material is subjected to extensive censoring, which questions its value for academic research.
army. On the other hand, the three powers were equally anxious not to grant each other undue favors in terms of intervening in Syrian affairs. What united them was little more than a diffuse dislike of what a British diplomat of the time termed the Quwatli administration’s ‘cult of independence and isolation’ (Records of Syria 2005, Vol. 10: 173). Thus, the three Western powers proved unable to act in a unified manner as will be discussed below.

The story of Western power politics in Syria starts off with US concern over the slow and hesitant manner in which Syria’s President and the Syrian Parliament dealt with US demands to grant right of way for the Trans-Arabian Pipeline (Tapline). This pipeline was constructed between 1947 and 1949 on behalf of the US-owned Arabian-American Oil Company (Aramco). At this time, Tapline was the most important US pipeline project in the Arab region and expected to deliver oil from Qaisuimah in Saudi Arabia to the port city of Sidon in Lebanon. It was significant in the context of US oil interests in Saudi Arabia and of strategic value for supplying oil to US allies in postwar Western Europe. Due to the founding of Israel in 1948, the original plan to have the pipeline end in the Palestinian port of Haifa was abandoned. Instead, a new revised Tapline route was scheduled to first cross Jordan and then the Syrian Golan Heights to end in the port city of Sidon in Lebanon.

In the scholarly literature, there is agreement that ‘[t]he structure of the U.S. petroleum industry played a key role in determining the content and conduct of foreign oil policy’ and that ‘[c]orporate power molded both policy objectives and outcomes’ (Painter, quoted in Vitalis 2002, footnote 14). There is, however, no agreement about the exact line of causality in terms of whether ‘business privilege’ (Anderson, quoted in Vitalis 2002, footnote 14) dominated the conduct of US foreign policy or, alternatively, US policymaking converted oil companies into informal instruments of US diplomacy. What is certainly true is that covert action by the Central Intelligence Agency (CIA), then newly founded, quickly became the instrument of choice to advance US political and economic interests in the region.

In the Syrian case, US support for the first coup of Husni Zaim in 1949 is beyond reasonable doubt, although the actual extent of CIA involvement has never been fully established since the relevant CIA files remain closed. The most convincing version of events, based on available open sources, suggests that local CIA agents and the local US military attaché acted independently from official endorsement by the State Department to maintain plausible deniability in their efforts to encourage Zaim to dispose of President
Quwatli (Copeland 1970: 50-53; Rathmell 1995: ch. 2; Curtis 2011; Moubayed 2012: 77-81). This effort was to a large extent driven by considerations related to the Tapline project. However, any balanced account of the history of the three Syrian military coups in 1949 must take account of the fact that the intervention of the Syrian military in domestic politics was motivated by mutually overlapping local, regional, and global factors. With the possible exception of Zaim’s US-backed first coup, the local Syrian and regional Arab factors proved to be more important than foreign intervention.

At the domestic level, the reputation of the Syrian army had been damaged by its weak performance during the war in Palestine in 1948. Restoring the army’s credibility clashed, however, with Quwatli’s post-war suggestion to shift Syria from a professional army toward a militia system. This move would have questioned the power of the officer corps and was therefore rejected in military circles. In addition, Quwatli had failed to provide the army with more advanced weaponry, and the military expected that regime change toward military rule would allow a process of catching up with the strength of some of the other armies in the region.

At the regional level, Syria’s difficult relationship with the two branches of the Hashemite dynasty in Jordan and Iraq, already referred to above, was also highly significant to explain the events of 1949. The scenario of unification with Jordan (‘Greater Syria’) or Iraq (‘Fertile Crescent’) was certainly attractive to some factions in the Syrian military. On the other hand, the Saudi King as Quwatli’s closest regional ally was concerned with a potential Hashemite-controlled land bridge between the Mediterranean and the Persian Gulf as an effort to seal off Saudi Arabia from the rest of the Arab world. He was therefore willing to back those factions in the Syrian army that were anti-Hashemite (Seale 1965: 47). The anti-Hashemite cause was also supported by France, which at this time still acted as the major supplier of the Syrian army. As a result, different Syrian army factions kept each other in check and no faction managed to gain any decisive advantage. Thus, all three coups of 1949 ultimately failed to realign Syria with any of the neighboring Arab states.

Finally, global factors were also significant to explain the breakdown of constitutional government in Syria. The Western powers were certainly interested to limit the decision-making autonomy of nationalist Arab governments such as the one in Syria. To begin with, the US, UK, and France did share economic interests in the Arab world such as shared ownership of the Iraq Petroleum Company. They wanted to run the oil
sector in a way that did not allow local Arab states to exercise much countervailing influence.\(^6\) The Western powers also shared political interests with regard to the construction of a regional defense organization in order to line up the Arab states against potential Soviet advances in the region. However, the expansion of US economic and political power and parallel decline of British and French positions in the Arab world triggered controversy among the Western powers: they each wished their own regional clients to exercise leadership in a regional Arab defense alliance. Thus, British efforts to advance the role of its Hashemite clients in Iraq clashed with American efforts to push for the regional leadership of Saudi Arabia (Gorst and Lucas 1989: 583, 593). In this context of preexisting Anglo-American alliances with local clients, Syria continued to be unaligned and was therefore forced to deal with contradictory and frequently changing Western objectives.

The US emerged in this situation as the new regional hegemon in the Middle East and the country’s newly acquired power was exercised in a rather experimental manner by bodies such as the CIA. For example, the CIA’s encouragement and very likely direct support of Colonel Zaim’s 1949 coup was at least partially motivated by efforts to speed up Syria’s agreement to the construction of the Tapline pipeline across Syrian territory. Another significant factor was the apparent willingness of Zaim to sign an armistice agreement with Israel and to accept the permanent settlement of Palestinian refugees in Syria (Rathmell 1995: 38). Thus, US interests were advanced without much concern for local Syrian conditions: removing the conservative and Saudi-linked Quwatli and replacing him with a military man seemed to offer an easy and convenient way of speeding up Syrian approval of US objectives such as the Tapline pipeline concession.

Directly after Zaim’s coup, this strategy appeared to work well. The new military regime quickly moved to adjust Syria’s government policy in line with Western and especially US objectives. Zaim started a domestic anti-communist campaign; withdrew all Syrian claims against Turkey over the Sanjak of Alexandretta; signed a Syrian-Israeli armistice formally ending the 1948 Palestine war; expressed in conversation with the US minister in Damascus a willingness to accept Palestinian refugees for resettlement in Syria;

---

\(^6\) At the beginning of the 1950s, share ownership of the Iraq Petroleum Company (IPC) was distributed fairly equally between American, British, and French oil interests (Wikipedia, no date). The IPC relied on a pipeline running between Kirkuk in the Kurdish region of Iraq and the Syrian port of Banias. Syrian policymakers frequently challenged the IPC and demanded higher revenue shares in exchange for the right-of-way of the IPC pipeline.
and approved the long-delayed Tapline concession on 16 May 1949, thereby satisfying the commercial interests of the US oil company Aramco (Little 1990a: 57; Rathmell 1995: 37-39). At the same time, Zaim’s regime also improved relations with France in order to gain access to more French military assistance (Rathmell 1995: 34-35; Whitman 2011: 21-22).

In terms of his regional policy, Zaim focused on continuing Quwatli’s course of close relations with Saudi Arabia and Egypt to ensure regional backing for his rule and to fend off Hashemite claims on Syria. There were also some efforts to construct a domestic support base beyond military circles when Zaim briefly linked up with the leftist Arab Socialist Party of Akram Hawrani. In summary, Zaim was determined to satisfy highly relevant local, regional, and international constituencies, which appeared to turn him into a serious contender for a stable authoritarian regime backed by the Western powers. Nevertheless, Zaim’s regime lasted only 137 days and ended with his downfall and execution on 14 August 1949.

The ultimate reason for Zaim’s failure was that his domestic political power base remained weak. His erratic personality, perceived as megalomania by some observers, irritated potential Western sponsors of his rule and his decision to assume the title of Marshall offended his fellow officers. Equally important, Zaim had made many enemies among the traditional Syrian elite, in Islamic religious circles, and among the followers of the SSNP. In particular, his decision to hand over Antun Saadeh, the founder and leader of the SSNP, to the Lebanese authorities for the latter’s alleged role in an earlier SSNP revolt in Lebanon resulted on 8 July 1949 in Saadeh’s execution in Beirut. Thus, Zaim’s role in facilitating Saadeh’s execution turned him into a prime target for retaliation by the SSNP (Rathmell 1995: 46-50). In summary, Zaim offended a critical mass of domestic opponents, thereby uniting them to push for his disposal.

The direct trigger for Zaim’s downfall was his plan to move army units to the Jabal Druze (the area to the south of Damascus in which the Druze make up the large majority of inhabitants) to break up the considerable degree of local autonomy of the Druze tribal leaders – an objective that his predecessor Quwatli had earlier failed to achieve (Seale 1965: 74-75; Rathmell 1995: 51; Landis 1998). However, Zaim’s threat of a campaign against the Druze was only the final step to motivate a group of officers led by Colonel Sami Hinnawi, commander of the First Brigade, to dispose of Zaim.

The second Syrian military regime of 1949, now chaired by Hinnawi, was backed by a set of SSNP-influenced officers such as Colonel Adib Shishakli, Akram Hawrani’s
Arab Socialist Party, the Aleppo-based People’s Party, and pro-Hashemite Druze leaders. In contrast to Zaim, Hinnawi stressed that he intended to restore a constitutional regime and elections were duly held on 14 August 1949 producing a victory of the Aleppo-based and pro-Iraqi People’s Party. However, the solid majority of the People’s Party in Parliament proved insufficient to allow Hinnawi to realize his objective of union with Hashemite Iraq. After announcing People’s Party plans for union between Syria and Iraq at the beginning of December, another officer group in the Syrian army led by Colonel Shishakli forced Hinnawi on 19 December 1949 to hand over power. In what amounted to the third Syrian military coup in nine months, Shishakli proclaimed that he intended to preserve Syrian independence and the autonomy of the Syrian army, which would have been lost in the event of an Iraqi takeover. In line with the blueprint of Zaim’s earlier bid for power, the Shishakli-led regime enjoyed CIA support (Weiner 2008: 149) and moved quickly to restore Syria’s privileged regional links with Saudi Arabia and Egypt whilst distancing the country from Hashemite Iraq.

Although Shishakli initially stressed his willingness to restore a constitutional regime, the period following his coup continued to be characterized by political instability. From the beginning of 1950 to the end of 1951, seven revolving door civilian governments were formed alternating in turn between National Party and People’s Party cabinets. In reaction to this weakness of the two traditional nationalist parties and the civilian politicians, Shishakli once again decided to dissolve Parliament in order to establish a personal dictatorship. This second dictatorship lasted in turn from the end of 1951 until 25 February 1954, when another military coup forced him out.

In the period following his second coup, Shishakli frequently expressed his goal to acquire substantial military assistance from the Western powers. Similar to Zaim’s earlier plans, Shishakli aimed to attract patronage by renewing Syria’s concession for Tapline and by offering to settle Palestinian refugees in Syria. However, Shishakli’s hope to exchange such accommodating policies against substantial Western (and especially US) military and economic assistance were vetoed in meetings of the Israeli Ambassador in Washington, Abba Eban, with US Secretary of State Dean Acheson. According to the Israeli Ambassador, military assistance to Syria amounted to a direct threat to Israel. This Israeli intervention proved to be successful with US policymakers while parallel efforts of Syrian representatives to argue their case were ignored by Washington (Foreign Relations of the United States, 5 January 1953: 1088-1093, and ibid., 6 January 1953: 1093-1094).
In conclusion, the major external reason for the failure of each of the three Syrian dictators to establish a strong regime was that the US, UK, and France all refused to grant substantial military and economic assistance. This collective Western rejection of assistance was not due to concern for constitutional government in Syria. Indeed, Syria’s more or less constitutional governments between 1946-1949, 1950-1951, 1954-1958, and 1961-1963 were also excluded from economic and military assistance. Rather, the three Western powers were already committed to other regional allies in the direct neighborhood of Syria. These pre-existing regional alliances appeared to offer more significant geopolitical returns in comparison with a substantially expanded engagement in Syria. This concerned the US alliances with Turkey and Saudi Arabia, the UK’s link with Iraq and Jordan, and the French concerns in Lebanon. Equally significant, the Western powers were also closely linked with Israel. Thus, from their geopolitical point of view, Syria appeared to be more trouble than it was worth: any new commitments in Syria were bound to increase costs elsewhere and would have raised concerns among the already existing allies and clients.

The difficulty of the Western position is illustrated in an exemplary manner when looking at an extensive British strategic debate on Syria that took place among senior British foreign policy circles in secret memoranda over the duration of the year 1952, i.e. during the first year of General Shishakli’s second dictatorship (Records of Syria 2005, Vol. 11: 69-106). According to some of the British observers, the Shishakli regime offered at this point good prospects for a stable and potentially pro-Western authoritarian regime in Damascus. The strategic problem for the UK was whether or not Syria should be upgraded to the status of a serious British ally. This would have implied to offer Shishakli’s regime substantial degrees of military assistance. There were two points of view. On the one hand, it was argued that a more serious engagement with Shishakli was the only way forward to advance British interests. According to the British minister in Damascus, these interests focused on three concerns, namely (1) to add Syria to a Western defense alliance in the Arab region; (2) to make Syria accept responsibility for a share of the Palestinian refugees that had fled Palestine at the time of the constitution of the Zionist state; and (3) to protect the Western powers’ joint oil interests as represented by the Iraq Petroleum Company (IPC) pipeline that crossed Syrian territory (Records of Syria 2005, Vol. 11: 73).

The British officials in favor of engaging Shishakli referred to the country as an ‘ultra nationalist’ state but argued that ‘it may be necessary to supply arms to such States in
order to ensure that we have some hope that they will pursue the policies which we approve (...) [T]his may be particularly the case in Syria’ (Records of Syria 2005, Vol. 11: 76). In a similar vein, it was argued that ‘confidence will only be gained when the Syrian officer feels that the Western Powers regard him as something more than a policeman’ (Records of Syria 2005, Vol. 11: 90). The same diplomat also stressed that ‘I have now reached a point at which I can make no headway here unless I can show (...) that we are interested in building up the Syrian army (...)’ (Records of Syria 2005, Vol. 11: 73). He then hammered home the point that we [i.e. the UK] ‘are not giving him [Shishakli] anything that he really wants’ and ‘before we can set Colonel Shishakli trotting towards the West both the stick and the carrot mist [sic] be applied’ (Records of Syria 2005, Vol. 11: 96-97).

Other British officials dismissed these points, however. They argued that British military assistance for Syria would offer no guaranteed benefits of any kind but was sure to offend Britain’s Hashemite Iraqi ally and might trigger security problems for Israel. It was suggested that ‘it may sometimes be justified to use a sprat in the form of some armament tidbit to catch a mackerel in the form of political influence to support our Middle East defence planning. But one needs to be sure that one is buying something more than the uncertain support of a transitory regime (...) grave doubts arise as to its expediency from our point of view’ (Records of Syria 2005, Vol. 11: 78). In the end, this British strategic debate on Syria produced no practical results. It appears that there was always some element missing in terms of motivating British policymakers sufficiently. Either the Shishakli regime was judged to be too weak domestically to be worth a serious effort to gain its favor or, alternatively, the British position of taking advantage of the very weakness of the Syrian state to push for ‘unity’ with Iraq under some British-backed security umbrella was considered to be too difficult to achieve.7

---

7 The only practical result of the British charm offensive to woo Shishakli was the delivery of two ‘Meteor’ trainer aircrafts to the Syrian air force in 1952. Another diplomatic dispatch states in this context that ‘I am not looking forward to the day he [Shishakli] finds out that the Israelis too are getting Meteors’ (Records of Syria 2005, Vol. 11: 105-106). More British jets were only delivered to Syria when the Shishakli regime was already on the way out.
4. Western covert action against Syria (1955-1957): How repeated efforts to unseat the Syrian government pushed the country toward the Soviet Union

The last section discussed the hesitation of the Western powers to offer military and economic assistance to Syria during the Shishakli period. After 1954, however, the Western powers changed course with regard to their respective interventions in Syrian affairs. Beforehand, their attitude had been characterized by hesitation while it now turned to intense activities. In order to explain this major shift from Western neglect of Syria toward all-out efforts to unseat the Syrian governments in 1956 and 1957 by means of at least three Western-sponsored coup attempts and various sideline plots that included Arab proxies and Turkey, one must first of all take account of the changing regional strategic environment. Most crucially, the Western powers started to realize in 1954 and 1955 that Nasser’s leadership of Egypt had the potential to fundamentally transform the strategic calculus of Arab politics, thereby endangering their regional control.

Initially, the British had hoped that Nasser would be willing to join a regional Arab defense alliance against the Soviet Union that was supposed to include the close British allies Jordan and Iraq as well as Syria. The Americans, in turn, were more interested to form a ‘Northern Tier’ alliance of states bordering the Soviet Union focusing on Pakistan and Turkey.\(^8\) At this point, US strategists still assumed that close personal relationships between Middle Eastern CIA operatives and Nasser, established before the Egyptian revolution, would allow them to exercise guidance over his policies. For his part, Nasser was keen to encourage such American assumptions since he expected to gain more leeway in his dealings with the British in turn (Little 2004: 678). In the event, Nasser first rejected the British-led regional defense alliance and then pushed Britain to negotiate a step-by-step withdrawal of UK troops from the Suez zone. For this purpose, Nasser signed a treaty with Britain on 19 October 1954 that set a time table for the withdrawal of the British garrison from their Suez Base by June 1956.

From the UK’s point of view, the new Egyptian policies directly challenged the British position in the Middle East. They triggered a strategic shift of British policymakers

\(^8\) In February 1955, Iraq and Turkey signed a ‘pact of mutual cooperation’ (the ‘Baghdad Pact’). Later in the year, Britain, Pakistan and Iran also declared their adherence to the pact. The United States signed mutual agreements with each of the member states without formally joining the Pact. The King of Jordan was unable to sign the Pact due to domestic opposition. However, the Iraqi revolution of 1958 resulted in the country’s withdrawal from the Pact and neither British nor American strategic objectives were ultimately achieved.
toward increased reliance on Iraq in order to protect access to the region’s oil supplies and pipelines. In this context, Syria gained urgent strategic significance ‘not because of any intrinsic value, but because of Britain’s attempt to preserve the Iraqi-Jordan axis embodied in the Baghdad Pact’ (Pearson 2007: 46) that had been founded in February 1955. Since Egypt had earlier rejected the Baghdad Pact and had subsequently sponsored, jointly with Saudi Arabia, an Arab counter alliance that was competing for political influence in Jordan, Lebanon and Syria, the British-led alliance seemed to be under threat. Moreover, the success of left-wing and Arab nationalist parties in Syrian elections in 1954 and 1955 appeared to increase Egyptian (and by extension possibly Soviet) influence in Syria. All these developments questioned the safety of the IPC pipeline that crossed Syrian territory and was absolutely crucial for British transfer of Iraqi oil to Western Europe. The British fear of Syria to ‘gravitate towards the Egyptian rather than the Iraqi orbit’ (Records of Syria 2005, Vol. 11: 476) increased further when the new Syrian government of Prime Minister Sabri al-Asali finally rejected Syrian membership in the Baghdad Pact on 22 February (Gorst and Lucas 1989: 578). At this time, British strategists started to seriously consider Iraqi plans to push for a ‘Fertile Crescent’ union of Iraq, Syria and Jordan, which would have secured British regional influence but depended on regime change in Syria in order to become a realistic proposition (Pearson 2007: 46).

In the meantime, and inconvenient from the British point of view, Quwatli was once again elected Syrian President. In his first post-election statement in September 1955, he promised to provide the Syrian army with modern equipment and to push for an alliance between Egypt, Syria and Saudi Arabia to oppose British plans (Records of Syria 2005, Vol. 11: 559). Nasser’s signing of an arms deal with the Soviet Bloc (the so-called ‘Czech arms deal’) on 27 September 1955 and the announcement of similar aspirations by Syrian politicians further intensified British concerns. By October 1955, British and American regional strategists began to converge on the view that the Syrian government should be forced out. Nevertheless, there was still tactical disagreement concerning the role of Iraq in a Western takeover of Syrian politics. The US Secretary of State, John Foster Dulles, was particularly keen to avoid the appearance of a direct takeover of Syria by Iraq, although he acknowledged in conversation with his British counterpart Macmillan that ‘Syria was the nearest thing in the Middle East to a Soviet satellite’ (quoted in Gorst and Lucas 1989: 582). Another British memorandum, issued by the Permanent Under-Secretary of the Foreign Office on 31 October, stated with confidence that ‘[i]n the event that Syria falls
under Soviet domination or seems likely to do so, we should encourage the liquidation of
the country and its incorporation into Iraq’ (Kirkpatrick, quoted in Gorst and Lucas 1989:
582).

The two Western powers now started to coordinate their efforts to deal with the
Egyptian and Syrian challenges. The general framework for joint action was ‘Project
Omega’ that amounted to ‘a secret blueprint for combating revolutionary nationalism
throughout the Arab world’ (Little 2004: 675). President Eisenhower’s approval of the
Omega project on 28 March 1956 overlapped with the joint preparation, by British and
American intelligence agencies, for a coup in Syria, termed ‘Operation Straggle’.
Preparation of the coup was considered to be of the highest priority due to parallel
developments in Egypt. Here, Nasser reacted to the withdrawal of British and American
funding promises for the Aswan Dam with the decision to nationalize the British and
French controlled Suez Canal Company on 26 July. This decision started the escalation
toward the Suez Crisis which resulted in the Israeli and subsequent joint Franco-British
invasion of Egypt on 29 October. The background of the escalation of the Egyptian crisis
explains why the Western planners were keen to force out the Syrian government in order
to limit Nasser’s ability to project his leadership across the Arab world.

In order to summarize subsequent Western covert action against the Syrian
government between 1956 and 1957, one needs to first of all acknowledge that many
sources are still closed for research. The secrecy surrounding the operations continues to
constrict the historiography of this crucial period of Syrian history.9 Thus, explaining how
Syria was pushed toward the Soviet Union during this period requires reconstructing the
various Western plots and subplots implemented between 1956 and 1957 in their entirety.
The historiography suggests that three main covert operations took place out of which two
were joint Anglo-American. These were in temporal order (1) ‘Operation Straggle’, a joint
British and American operation that took place between March and October 1956 and
ended in the uncovering of the plot by Syrian intelligence; (2) ‘Operation Wappen’, the

9 For example, a recent handbook of Middle Eastern intelligence covers only two of arguably at least
five Western covert operations against the Syrian government in 1956 and 1957 (Kahana and Suwaed
2009: 246-248). Another recent account of American interventionism against nationalist governments
in developing countries fails to mention CIA efforts to unseat Syrian governments (Sullivan III 2008).
Finally, a recent monograph on CIA history provides only a sketchy summary of US contacts with
Shishakli and fails to adequately sum up the existing literature.. In particular, the CIA operations in
1956 and 1957 are explained in a manner that does not allow readers to understand the geopolitical
objectives motivating the agency (Weiner 2008: 159-161).
CIA’s unilateral effort to recruit right-wing dissidents inside of the Syrian army for a coup that would bring back Shishakli as dictator of Syria that was in turn uncovered by Syrian intelligence on 12 August 1957; (3) the ‘Preferred Plan’, another combined effort of the two Western powers that was put forward in September 1957 in order to promote unrest within Syria to be followed by armed incursions from neighboring countries and the assassination of Syrian key political and military figures that had stopped the two earlier coup attempts. In addition, the US engaged in efforts to encourage Turkey to invade Syria after August 1957 while the UK aimed for a Jordanian and/or Iraqi attack on Syria to force through British plans for Syria’s membership in the Baghdad Pact.

If there was any common denominator explaining these covert operations, it amounted to British and American willingness to pursue ‘trial-and-error’ tactics in the hope that a weak spot in Syrian defense efforts could be found. In turn, Syria’s defense against Western covert action, and parallel efforts of Nasser and the Syrians to exercise countervailing influence in neighboring Jordan and Lebanon, were regularly labeled by the Western powers as evidence of Egyptian and Syrian aggression which, it was claimed, ultimately took place on behalf of the Kremlin. What resulted was a circle of aggression, counter-aggression, and counter-counter-aggression in which the Western powers and Syrian counter intelligence traded punches. This sequence of events only ended once Syria escaped further destabilization by unification with Egypt in the United Arab Republic.

Briefly sketching the various plans for a Syrian coup in turn, ‘Operation Straggle’, the first coup effort, remains difficult to pin down today due to the sheer number of potential coup candidates considered by the Western powers. They included pro-Iraqi factions of the SSNP (the scenario preferred by the British); a leader of ‘Syrian moderates’ with contacts in the Syrian army (the scenario preferred by the Americans); the restoration of Shishakli to power (also considered by the Americans); mobilization of pro-Iraqi tribes to allow Iraq a takeover of Syria; and plans to engineer border incidents on the Syrian-Turkish border in order to facilitate a Turkish military attack on Syria (Saunders 1996: 48-51; Little 2004: 674-676). All these scenarios failed, however, since the coup date was fixed for 29 October 1956. On this very day, Israeli troops started their attack on Egypt triggering the Suez Crisis. Thus, plans for the Syrian coup were hastily abandoned. In Syrian historiography, these events are termed the ‘Iraqi Coup’, due to the involvement of Iraqi-sponsored SSNP members in this first round of failed coup efforts.
In the second round, the CIA made efforts to identify politically conservative dissidents in the Syrian army in order to have them conduct a US-backed coup. This operation, termed ‘Operation Wappen’ in CIA documents and known as the ‘American Plot’ in Syrian accounts, appears to have been triggered by the arrival of CIA operative Howard Stone in Damascus in June 1957. Yet the plan proved to be another fiasco: the CIA-targeted Syrian army members informed Syrian counter-intelligence and, on 12 August 1957, the US embassy in Damascus was surrounded by the Syrian authorities. This resulted in Stone’s arrest and his subsequent ‘confession’ of the plot to the Syrians (Little 2004: 677).\footnote{There exists disagreement in the literature about the extent of coordination of US and UK coup efforts in Syria. Some authors argue that another unilateral American operation, termed ‘Operation Wakeful’, took place in the context of ‘Wappen’, while others consider ‘Wakeful’ to constitute an independent US operation without the participation of British intelligence (see Prados 2006: 163-164; and Pearson 2007: 48).}

Between August and October 1957, the crisis in Syria continued to escalate. Unwilling to accept failure in their efforts to unseat the Syrian government, British embassy staff in Washington and American intelligence operatives, including Kermit Roosevelt, reorganized their cooperation by forming a ‘Syria Working Group’. The group’s report, put forward on 18 September 1957 and ‘receiving the endorsement of the most senior political leaders in the US and British governments’ (Jones 2004: 409), converged in a ‘Preferred Plan’ (a term used in the report’s preface) to stir up disturbances within Syria followed by border incidents involving Iraq and/or Jordan. This was expected to serve as a pretext for Iraqi military action against Syria under the self-defense provision of Article 51 of the United Nations Charter, combined with efforts to encourage Bedouin tribes and Druze elements in the Syrian army to rise up against the Syrian national government. The document suggested the setting-up of a Jordan-based ‘Free Syria Committee’ and recommended the targeted assassination of some key Syrian army and intelligence figures as crucial for the successful conclusion of the operation (Jones 2004: 405-408). Just as in the case of the two earlier operations, the ‘Preferred Plan’ proved infeasible. This was due to a combination of factors such as a lack of support for Western
plans within Syria and the short time frame available for coup action before the beginning of the rainy season in November. Moreover, Western observers were agreed that Iraqi and Jordanian armies ‘did not possess the short-term military capability to overcome anything above token Syrian resistance’ (Jones 2004: 406).

In parallel with the ‘Preferred Plan’, the US also considered backing unilateral Turkish moves to engage in a military invasion of Syria. When Turkish troops began a military build-up on the Syrian border in mid-September, the US sixth fleet was moved to the Syrian coast to provide for additional military back-up. However, this ‘Turkish alternative’ (a term suggested by Pearson 2007 to describe what could have been an alternative scenario to unseat the Syrian government) suffered from serious shortcomings, such as the potential of a Turkish attack to stir up pan-Arab nationalist sentiments in favor of Syria. In fact, war between Turkey and Syria would have threatened the IPC pipeline that crossed through Syria and would therefore have hurt the economic interests of Hashemite Iraq as the leading British client in the region (Pearson 2007: 49-50).

In the end, neither the ‘Preferred Plan’ nor the ‘Turkish alternative’ took off. Instead, the Americans turned back toward diplomacy and pushed the Saudi leadership to act as an alternative to Nasser’s version of Arab nationalism. This shift allowed the return toward intra-Arab diplomacy. Most importantly, however, a general balance of threats at the regional and global level had emerged: Turkey experienced Soviet pressure to stop its mobilization drive on the Syrian border while Nasser used this opportunity to land a small detachment of Egyptian troops in the Syrian harbor city of Latakia on 13 October. Since Nasser’s initiative was in effect backed up by the Soviet Union, a Turkish invasion of Syria was by now considered to be too dangerous from the Western point of view (Lesch 1996: 139).

Ultimately, the Syrian crisis fizzled out once it became clear that all scenarios to push out the Syrian government were doomed to failure. Neither was Saudi Arabia able to take over Nasser’s leadership role in the Arab world, nor were the Western allies Iraq, Jordan, and Lebanon in a position to take over Syria militarily (Lesch 1996: 140-141; Pearson 2007: 54). As soon as Turkey and the Soviet Union mended their fences, the tide of events shifted back toward direct diplomatic exchanges between Nasser and the Americans. Nasser now announced that he, too, was concerned about rising communist influence in Syria. Some degree of consensus arose that the ‘Soviet threat’ in Syria was represented by Army Chief Afif al-Bizri and by Khalid al-Azm, a six-time prime minister
of Syria, who was at the time backed as a potential presidential contender by the Syrian Communists. Following Nasser’s tactical rapprochement with US interests, the Egyptian leader asked his supporters in Syria to form a united front with the Baathists to strengthen the political center ground and to guard against further coup attempts from leftist and rightist forces. This operation proved a success: the Syrian Baath Party started supporting Nasser’s project of union with Egypt as a way to block further advances of the Syrian Communists.

On 12 January 1958, a delegation of Syrian army officers flew to Cairo and the United Arab Republic, the union of Egypt and Syria, was declared after brief negotiations on 1 February 1958. Thus, unification with Egypt proved the ultimate safeguard to allow Syria a degree of protection against external threats, although at the price of becoming part of a larger political entity. Yet this political course was only feasible because the Soviet Union had already strengthened the Egyptian and Syrian military since 1956 and continued to act as the patron of the United Arab Republic after 1958. The Soviet willingness to support Nasser despite the latter’s heavy-handed repression against Egyptian and Syrian Communists underlined that the Soviet leadership was satisfied to acquire indirect regional geopolitical influence rather than to take over and control Arab states directly.

In the final analysis, the US and UK led 1956-1957 destabilization campaign in Syria must be understood as the outcome of earlier Western decisions in favor of weak Syrian statehood, which allowed the country only limited degrees of political autonomy. The post-independence Syrian civilian and military leaders understood, at least to some extent, that Western policymakers were keen to appeal to Syria’s minority communities with a history of autonomous decision-making, such as the Druze, and to representatives of regions with a history of close links with neighboring countries, such as the Aleppo-based People’s Party aligned to Hashemite Iraq, in their efforts to weaken the Syrian central state and Syria’s national army. Most of Syria’s political leaders in the late 1940s and early 1950s were therefore pushed to strengthen Syria’s statehood and independence in order to discourage plans of the two neighboring Hashemite countries, Jordan and Iraq, to enforce ‘Arab unity’ by way of a takeover of Syria. Yet the Western powers never accepted this reasoning of Syria’s historical nationalist leadership. Instead, they claimed to be concerned about a potential arms race among the Arab states and between the Arabs and Israel. Indeed, the latter point served as a pretext to minimize Western support for Syria.
However, the Western policy of restraint and ‘evenhandedness’, enshrined in the ‘Tripartite Declaration’ of 1950 on arms exports to the region between the US, Britain and France, was by no means neutral. First, it offered Britain and France a near monopoly of supply of military goods to the Arab states and, in the case of France, to Israel – at least as long as the US followed their stated objective of avoiding significant arms transfers to the region. Second, it ignored extensive US economic assistance to Israel since the early 1950s, which made the US from the very beginning the main economic patron of Israel. Third, France, with tacit US agreement, allowed Israel access to nuclear secrets which subsequently turned the country into the Middle East’s only state with a nuclear arsenal. Fourth, the SIPRI arms transfer database for the years 1950 to 1957 (see appendix, pre-1950 data is not available) underlines that Western and especially French arms deliveries to Israel made parallel delivery of weapons to Syria extremely insignificant by comparison. Although British arms deliveries to the region were slightly more even-handed, especially when factoring in delivery to Iraq and Jordan, the then Arab client states of the UK, it is clear that the Syrian army never enjoyed support from any Western power on a scale that would have had strategic significance; meanwhile Israel quickly gained the ascendancy.¹¹

Conversely, the policy of tacit Western boycott of Syria’s military was the main reason for the absence of Western networks of influence within the Syrian army. Judged with the advantage of hindsight, the revolution in military affairs of the 1950s in the Middle East concerned the success or failure of Arab states to acquire the trappings of a modern army. At that time, the most significant task was to gain access to an air force equipped with jet fighters that were then representing the cutting edge of strategic power. If one looks back at the track record of the Syrian military, it is clear that Shishakli was keen to deliver these objectives but was kept out in the cold by the US administration while receiving only token support from Britain. Yet as soon as Nasser linked up with the Soviet Union, Egypt started to receive quick and relevant military assistance from the Kremlin, which included access to the most advanced Soviet jet fighters. Due to the Egyptian example, it became clear that the Soviet road was the only one available to the Syrian

---

¹¹ As for the interpretation of the relevant SIPRI data (see appendix), one must stress that the Western military supplies to Syria during the period, such as the Italian G-55 and G-59 fighter planes, were mostly WW2 leftovers and already obsolete in the era of jet fighters. The policy of tacit Western boycott of the Syrian military in the late 1940s and early 1950s underlines that the country was destined to follow the Lebanese example, where the national army never developed beyond the status of a militia and has subsequently been unable to defend the national territory.
military in order to gain a regional strategic role. In this context, the quick delivery to Syria of MiG-15 and MiG-17 Soviet jet fighters in 1956 and early in 1957 changed the strategic calculus in the Middle East and allowed the country to deter a possible invasion from neighbors such as British-backed Iraq and US-backed Turkey (Rathmell 1995: 141).

Once the Soviet deliveries had arrived, western analysts realized that ‘[t]he Soviet bloc build-up of Syria does not appear to be a short-term project…. There appears…no restriction on what the Syrians can order…. The quantities of aircraft and arms talked of by Syria are more than her armed forces can absorb in the immediate future. They are not, however, excessive on the assumption that the army and air force are to be completely re-equipped with Soviet equipment’ (Records of Syria 2005, Vol. 12: 150-151). In summary, Syria’s turn to the Soviet Union, in line with the earlier Egyptian example, allowed the country to acquire the patronage necessary to become a serious regional power. The parallel strengthening of the Syrian military and Syrian state by the Soviet Union since the second half of the 1950s had geopolitical significance that continues to influence Middle East politics today.

5. The political trajectory of independent Syria between 1946 and 1958: Seven major explanatory factors

When Syria emerged as an independent country from the French Mandate in 1946, it immediately acquired an outcast role since it was the only major state in the region that was not directly linked to the Western powers by way of patron-client relationships. Neighboring Lebanon, the other country in the Levant region without any clear-cut external sponsorship, was divided along sectarian lines and never played much of an independent role in Arab politics ever since its independence in 1943. For the purpose of political analysis, the first cycle of Syria’s statehood between the date of independence on 17 April 1946 and the time of the country’s unification with Egypt on 8 February 1958 to form the United Arab Republic can be divided into three distinct time periods, namely (1) a weak formally democratic regime from 1946 to 1949; (2) a period of punctuated authoritarian rule between 1949 and 1954; and (3) a return to a weak formally democratic regime between 1954 and 1957.

The first period covers the weak republican democratic government of the country’s first President Quwatli. This was followed by the period of the three military leaders (Zaim and Hinnawi in 1949 and Shishakli between 1949 and 1950 and from 1951
to 1954, respectively). Each of these authoritarian rulers aspired to set up a stable regime, yet they all ultimately lacked the domestic and external sources of support that would have been necessary in order to achieve their authoritarian goals. While Shishakli was more sophisticated than his two colleagues in efforts to gain US endorsement for his rule, none of the Syrian candidates ultimately received Western endorsement. Crucially, this rejection was by no means due to concern on the part of the Western powers over issues of democracy versus dictatorship; rather the Western powers were hesitant to prop up any Syrian leadership, whether notionally democratic or not, for fear of weakening regional stability in general and the emerging military dominance of Israel in particular.

At the same time, the Western powers were united in expecting Syrian leaders to endorse Western oil pipeline projects such as Aramco’s Trans-Arabian Pipeline and the IPC’s Kirkuk-Banias Pipeline, both highly significant for American and British oil business, in a timely manner and without too much bargaining on the part of the Syrians. They also pushed for Syrian acceptance of the resettlement of Palestinian refugees who had been forced from their land due to the creation of the Zionist state. Last but not least, the Western powers demanded that Syrian leaders should sign up for regional defense alliances against a perceived Soviet threat such as the Middle East Command, Middle East Defense Association, and Baghdad Pact, respectively. In this context, the Western powers claimed to fear the emergence of a geopolitical ‘vacuum’ in Syria, which was in turn blamed on the country’s ‘ultranationalism’ (a term initially coined by British diplomats to describe Quwatli’s presidency). Ultimately, the Western powers feared that the alliance between Nasser and the Soviets would challenge American and British regional dominance in the Middle East.

What the Western leaders were unwilling to recognize, however, was that Syria’s outcast status and the resulting ‘vacuum’ were very much of their own making. If the United States had been willing to offer military and economic assistance, the country would certainly have been in a strong position to establish privileged relationships with Syria. This was certainly true for the duration of Shishakli’s rule and probably would have also applied for other windows of opportunity to engage Syria, such as in the time period directly after the Franco-British and Israeli attack on Nasser’s Egypt in 1956, when the American rejection of Franco-British ‘colonialism’ allowed for a rapprochement between the US and some Arab nationalist leaders.
However, Syrian leaders’ initial openness to US assistance in their state building efforts was ultimately abandoned because of the Anglo-American destabilization efforts of 1956 and 1957. By this time, the Syrian governments of the day felt that the repeated coup efforts of Anglo-American operators were evidence for the Western powers’ interest to rule Syria by dictate. In fact, the three covert actions for Western takeover of Syria, namely the joint British-American coup plan ‘Operation Straggle’ of 1956; the ‘Turkish plot’ of 1957; and the ‘Operation Wappen’, also known as the ‘American Plot’ in Syrian historiography (Rathmell 1995: 136-143; Kahana and Suwaed 2009: 246-248), all underlined that Western geopolitical interests did not allow for any significant degree of Syrian autonomy. After each of these failed operations, the Western powers in general and the US in particular lost more of what had remained of their influence within Syria.

In summary, several factors explain why Syria was first pushed toward Nasser’s Egypt and then toward long-term geopolitical alignment with the Soviet Union: four global, one regional Arab, and two domestic Syrian factors explicate the country’s outcast role in the region when looked at from the point of view of the US and the other Western powers.

The four global factors were as follows: (1) lack of policy coordination of the three relevant Western powers, i.e. the US, Britain, and France toward Syria; (2) unwillingness on the part of the Western powers to accept Arab (and Syrian) nationalism as a genuine third force in the early Cold War era and failure to offer relevant military and economic assistance; (3) backlash within Syria against US and British covert action in 1956 and 1957 that failed to unseat Syria’s leadership and destroyed what had remained of Western influence among the Syrian elite; and (4) countervailing willingness of the Soviet Union to pursue limited objectives in the Middle East which offered Syrian political leaders an attractive alternative to Western patronage.

Firstly, the three Western states failed to effectively coordinate their regional and Syria policies. France was initially very reluctant to leave Syria and applied military force in efforts to extract economic and military concessions from Syria’s nationalist leadership in 1945 and 1946. However, Syrian resistance and an informal Anglo-American alliance jointly removed France as a stakeholder in the Levant. In the early 1950s, France reappeared in the area as the principal military supplier of Israel; yet this move made it impossible for France to regain substantial influence with any of the Middle Eastern Arab states (Mott 2002: 177). Britain as the second European power in the region principally aimed to defend the status quo and focused on efforts to sustain privileged relationships.
with its Hashemite clients in Jordan and Iraq. In 1952, UK policymakers seriously considered adding Syria to the fold. Yet, most senior Syrian policymakers continued to reject closer links with the neighboring Hashemite countries since they considered them to constitute the principal danger to Syria’s statehood and independence. The same Syrian policymakers also declined to join the British-sponsored Baghdad Pact in 1955 and, after the 1956 Suez disaster, Britain lost the ability to exercise independent regional leadership (Walt 1987: 59).

By contrast, the sometime US posture as a principled opponent of European colonialism in the Middle East was due to the country’s lack of interest in burdening itself with the fate of the two declining European powers. At this time, the US did not require Middle Eastern oil supplies while Britain and other Western European countries needed them in order to facilitate the economic recovery of Western Europe. Thus, US policymakers consciously refused to offer substantial military assistance to any of the Arab countries and US Defense Secretary Lovett summed up his country’s position in 1952 stating that the Arabs should only receive ‘[l]imited quantities of non-competitive (obsolete) items of military equipment’ (Foreign Relations of the United States, 6 September 1952: 2335). Overall, the Americans did not rush to formally take over British positions; they could be confident that the laws of political gravity would allow them to soon replace what remained of British regional influence. In this context, the British failure to install political and military alliances in the early to mid-1950s to reorganize the Arab region as part of a Cold War front against the Soviet Union, most notably the Baghdad Pact, did not concern the US too much. After all, American power could also be exercised in direct bilateral relationships with the Arab states, Turkey, and Israel.

The second factor explaining the failure of the Western powers to establish a strong position in Syria was their collective rejection to engage with Arab (and Syrian) nationalism. In this context, Nasser’s policy of ‘positive neutrality’ of Egypt in the Cold War – i.e. the unwillingness of Nasser to take sides in the global geopolitical confrontation between the US and the Soviet Union – was misunderstood as a smoke screen for communist subversion or even a communist takeover by proxy. The US failed to understand Nasser’s skillful use of the Cold War context, soon to be copied by the Syrians, to extract economic and military assistance from the Soviet Union while avoiding any alliance with local communist forces. As for Syria, Britain was unable to act due to its preexisting regional alliances with Jordan and Iraq.
The US, too, failed to fill the gap and did not make any genuine offers to any of the Syrian leaders in the early 1950s. This was made clear in a crucial personal exchange between US Secretary of State, John Foster Dulles, and Syria’s ruler General Shishakli that occurred in the American Embassy in Damascus on 16 May 1953. When Shishakli used the opportunity to make his case for US military assistance to build up the Syrian army, Dulles first voiced concern for Israel’s security and then fell back on technicalities in order to avoid any direct engagement with the issue at hand. In this context, Shishakli made the reasonable point that ‘it would not be wise to get involved in a “vicious circle” where Syria cannot receive United States aid until it gives a specific undertaking or engagement, while on the other hand Syria cannot give an undertaking or engagement until it is assured of a program which meets its requirements’ (Foreign Relations of the United States, 16 May 1953: 64; see also Saunders 1996: 23-25). By way of reply, ‘Mr. Stassen [Director of the US Mutual Security Agency] said he believed this could be made by a step-by-step approach to the problem. General Shishakli said that the problem was really to find a point in the circle from which to start’ (Foreign Relations of the United States, 16 May 1953: 64, emphasis added). Of course the right point in the circle was never found.

The third factor explaining the Western powers’ failure in Syria was the short-termism of Britain and the US in their dealings with the Syrian leaders. Both powers failed to establish strong networks of influence and the various Western coup attempts in Syria between 1956 and 1957 had the unintended consequence of increasing the influence of the Nasserist and Baathist forces in the Syrian army at the expense of potentially pro-Western conservative elements. In fact, even conservative Syrian nationalist leaders were now keen to distance themselves from the Western powers. President Quwatli, for example, went so far to label the US an ‘overt foe’ in July 1957, which made the US Chargé d’Affaires issue the countercharge that his speech was ‘indistinguishable from Communist propaganda’ (cited in Rathmell 1995: 136). Thus, the Western powers had hardly any friends left in Syria in the second half of the 1950s.

The fourth factor explaining Western failure in Syria in the 1950s was the countervailing role of the Soviet Union. From the Soviet perspective, the Middle East was a new geopolitical region to enter and Soviet policy was not informed by the long track record of imperial rule in the manner in which British and French regional expertise trickled down to US policymakers. Thus, the Soviet Union pursued limited objectives in comparison to the US, namely to acquire a power stake in the Middle East by way of
privileged relations with friendly regimes, rather than a communist takeover that was never a realistic objective for the Egyptian and Syrian CP’s and would have inevitably resulted in direct confrontation with the US. Moreover, Soviet strategists knew that the previous unwillingness of the Western powers to construct patron-client relationships with Egyptian and Syrian leaders had opened the door for them. For example, the six-time Syrian Prime Minister Khalid al-Azm praised the Soviets in 1957 stating that ‘[t]he U.S.S.R. has given us political support and supplied us with arms, which we were completely unable to obtain from countries other than the U.S.S.R.’ (al-Azm, quoted in Ro’i 1973: 232).

Between 1955 and 1957, the Syrian army quickly acquired a serious air force based on large numbers of advanced Soviet MiG jet fighters (see SIPRI data in the Appendix below). This dispatch of Soviet military assistance immediately strengthened Syria’s regional standing and, together with explicit Soviet warnings to Turkey, helped to deter Turkey from a potential military attack on Syria in 1957 (Lesch 1996: 137-139). Once committed, the Soviets were willing to build up the client armies of Egypt and Syria in a sustained manner, which, in turn, allowed the military to become the dominant actor in domestic politics. In this sense, the Soviet Union’s intervention in the Middle East in the 1950s had a lasting impact on the behavior of all other states in the region.

In addition to the four global factors, one regional Arab and two domestic Syrian factors also explain the trajectory of the Syrian state between 1946 and 1958.

At the regional level, the emergence of at least notionally independent Arab states after WW2 produced a new balance of power in the Levant and on the Arab peninsula. Two sets of states contested for regional hegemony: an alliance made up of Egypt and Saudi Arabia faced another camp consisting of the two Hashemite Kingdoms in Jordan and Iraq. In this intra-Arab leadership contest, Syria quickly became the main site of contestation. Thus, the Sykes-Picot borderlines, imposed by Britain and France in order to divide and rule the Arabs, did serve their function as judged from the point of view of the Western powers. Syria emerged as a swing state in this regional balance; yet all efforts by outsiders to make Syria join either of the two camps ultimately failed. This was due to the fact that ‘Arab unity’ along ‘Greater Syria’ or ‘Fertile Crescent’ lines (i.e. unification with Hashemite Jordan or Hashemite Iraq, respectively) was never accepted by a decisive majority of Syrians. Rather, the highly mixed ethnic and sectarian composition of Syria forced domestic policymakers to first and foremost stabilize their own state. In this effort,
they looked for support from those Arab states that were least likely to demand the takeover of their country by way of ‘unity’.

This explains why Syria’s post-independence leaders were keen to receive Egyptian and Saudi support, were fairly open for US assistance at various times in the late 1940s and early 1950s, and were generally critical of Hashemite and British power since they were considered to be the main danger to Syria’s independence. The two Hashemite states, in turn, certainly tried to gain influence within Syria too. Yet the project of unifying Syria with Iraq that was advanced by the Aleppo-based People’s Party and briefly became official Syrian government policy during Hinnawi’s rule in 1949 – or indeed any other unity project – would certainly have produced new internal divisions. Moreover, the Western powers also rejected Arab unity projects and British policymakers genuinely preferred Arab regional stability compared to the expansion of power of their Hashemite clients by way of a takeover of Syria. After the Suez disaster in 1956, British policymakers reconsidered the Syrian issue but such efforts came too late in the day. The same applied to US efforts to push the Saudi King as an alternative regional leader against Nasser and for parallel attempts to bring back General Shishakli as figurehead of a pro-American regime in Syria during one of the 1957 coup attempts. In summary, British and American regional policymakers failed to use the windows of opportunity that had been available in Syria before 1956 and that were no longer available once the Soviet Union entered the Middle East as a competing power.

Finally, two domestic Syrian factors must also be considered to explain Syria’s trajectory between 1946 and 1958.

First, one must take account of the extraordinary weakness of the postcolonial Syrian state, which was characterized by domestic conflict between different ethnic and sectarian groups, weak central authority, and a weak political class consisting of representatives of the landed aristocracy unable to accommodate to modern mass politics. In order to retain power in a difficult environment, Syria’s first President Quwatli relied on regional alliances with Egypt and Saudi Arabia to support him against his Hashemite adversaries. However, these alliances were never endorsed and backed up by British and American policymakers. While Quwatli’s conservative political views might have marked him out for Western support under a different set of circumstances, they ultimately failed to protect his presidency because he insisted on his own autonomy and business interests. In the eyes of US and UK policymakers, Quwatli’s behavior showed the latter’s
unwillingness to enter into a patron-client relationship. This made his presidency vulnerable and he was easily forced out by Zaim’s 1949 army coup.

The second domestic factor concerned the issue of army power in the context of a weak state. Between 1949 and 1954, three military officers (Zaim, Hinnawi, and Shishakli, respectively) pursued efforts to replace the civilian institutions and to become ‘strong men’ backed up by the military. They all hoped to turn the strong domestic position of the army into a launch pad to stabilize Syrian statehood. Yet two of the three contenders for the position of authoritarian leader were very weak personalities. In particular, Zaim’s understanding of politics was limited and his impulsive attempts to monopolize power turned him into a source of ridicule in the eyes of his fellow officers. When Hinnawi subsequently replaced Zaim, he was little more than a coincidental figure gaining power without a program. His only significant initiative was to advocate for Syria’s unity with Iraq (‘Fertile Crescent’); yet this proposal directly triggered his own downfall and his short period at the top of Syrian politics did not influence subsequent events.

By comparison, the third contender for power, Shishakli, was a much more serious figure who tried to bargain with the UK and US in a sophisticated manner courting their endorsement and patronage. The main objective of Shishakli was to receive Western military and economic assistance in order to stabilize the Syrian state. In the context of the early 1950s, this concerned in particular the creation of a credible air force as a new branch of the Syrian army in line with similar efforts in neighboring Arab countries and in Israel. However, the Western powers’ rejection to consider delivery of relevant military assets underlined that Shishakli was not considered valuable enough to deserve endorsement from outside. In fact, Shishakli simply could not offer one-sided accommodation of Western objectives, such as the agreement to permanently settle Palestinian refugees in Syria, without receiving anything in return in terms of Western pressure on Israel to follow the relevant UN resolutions that would have addressed some of the Arabs’ legitimate grievances. This limit in Shishakli’s willingness to please Western interests was driven by well-founded concerns over his own standing in Syrian domestic politics. His power base was ultimately not strong enough to impose policies that would have offended the mainstream Arab nationalist opinion of the time. Thus, when US policymakers pointedly refused to take the first step in providing military supplies for Syria, Shishakli had nowhere else to go. He subsequently suffered the same fate as his civilian and military predecessors.
in the role of Syrian state leader: his own domestic support base crumbled and his regime suffered breakdown.

Conclusion
In summary, all civilian and military efforts to stabilize the Syrian state after independence in 1946 failed due to a combination of the Cold War conflict, intra-Arab contests over regional hegemony, and Syrian domestic conflicts. These different levels of instability jointly weakened the ability of all domestic Syrian regimes between 1946 and 1958 to acquire substantial resources in the military and economic fields to back up the country’s independence. As a weak state, Syria became the object of foreign interference, while domestic actors lacked the capability to strengthen the system from within. This changed, however, when Egypt emerged as the center of independent Arab political strength under Nasser’s leadership. The emerging strategic alliance between Nasser and the Soviet Union was soon extended to Syria, and the country was able to leave behind some of the chronic instability that had characterized the period between 1946 and 1958.

Yet the ‘cure’ for the weaknesses of the Syrian state served only to prepare the ground for new powerful challenges, just as it had in the case of Egypt. Increasing the strength and political influence of the military resulted in structural domination of the state by the military – with lasting repercussions for the politics of Egypt and Syria that have continued to the present. Syria’s relative isolation in the region once again became apparent when US policymakers managed to regain control of Egypt’s leadership in the mid-1970s during Anwar Sadat’s rule, thereby breaking the balance of power between the Arabs and Israel in favor of Syria’s main opponent. Thus, the geopolitical accident of Syria’s emergence as an independent but weak country, lacking stable geopolitical patronage and aligning itself with the weaker of the two superpowers for lack of any viable alternative, set the scene for the existential challenges forced upon the Syrian people today. In this context, it is timely to be aware that Western destabilization of Syria started well before the Baath regime even existed.

UK National Print Media Coverage of Sexual and Gender-Based Violence (SGBV) against Refugee Women in Syrian Refugee Camps

Özlem Özdemir
Abstract
The vulnerability of Syrian refugee women does not draw the public attention it deserves. In this regard, media coverage thus has an important role to illustrate these women’s vulnerable situation and to create public awareness. This research aims to reveal the sensitivity and awareness level of the UK national print media of SGBV (sexual and gender-based violence) against refugee women in Syrian refugee camps. News published in five daily major UK national newspapers (Guardian, Independent, Daily Telegraph, Times and Sun) between March 15, 2011, and December 15, 2014 referencing Syrian refugee women have been analysed in accordance with feminist critical discourse analysis methods. Results show that media coverage of SGBV against Syrian refugee women is limited. Gender and violence perspectives of the refugee dilemma are mostly ignored.

Keywords: Syrian refugee women, print media, sexual and gender-based violence, Syrian refugee camp, Syrian conflict, Middle East
Introduction

The birth of the Arab Spring in the Middle East began in Tunisia, with the self-immolation of 26 year old street vendor Mohammed Bouazizi on December 17, 2010, after fighting with Tunisian police, who wanted to take away his vegetable and fruit cart in the town of Sidi Bouzid. This tragic event sparked country wide mass protests and violence. Pro-democracy protest spread throughout the Middle East. Egypt, Libya, Yemen, Bahrain, Jordan, Iraq, Kuwait, Morocco, Sudan, and Algeria, targeting dictatorships, injustices, corruption, human rights abuses, poverty, unemployment and repression of free expression prevalent across the region.

Similar pro-democracy protests began on the streets of Syria, not welcomed by the Syrian Government. Consequently, fifteen protesting children between the ages of 10 and 15 in Daraa, who spray-painted slogans against the regime on school walls, were arrested and tortured by the police in late February 2011 (Human Rights Watch, 2011). Nonetheless, protests demanding Bashar Al-Asad's resignation soon erupted across Syria, with opposition insurgent groups such as Free Syrian Army emerging to launch an armed struggle against the regime (Rodgers et al, 2014). Since then, Syria has been in a civil war, forcing millions to flee their country.

According the UN High Commissioner for Refugees (UNHCR) (2015a), as of October 2015, 4,180,631 Syrian refugees are now outside their country, and around 6.5 million displaced within Syria (OCHA, 2015). Syrian refugees have become the world’s largest population under UNHCR care (UN News Centre, 2014). Most arrived in refugee camps located in neighbouring countries, such as Turkey (22 refugee camps), Jordan (3) and Iraq (11). The other neighbouring country, Lebanon, has no formal refugee camps but more than one million Syrians live in rented housing or nomadic camps. (UNHCR, 2015b; 2015c; 2015d).

Within the camps, gender balance is roughly equal (UNHCR, 2014) but camps often unsafe, especially for women. Women tend to suffer harshly on becoming a refugee and need additional protection to prevent sexual and gender-based violence (SGBV), such as rape, sexual exploitation, violence, harassment, abuse, early marriage and forced marriage. Unfortunately, such protection is often far from forthcoming.

There is thus a clear role here for the combined power of the mass media to focus and highlight this issue of SGBV in the refugee camps. However, there is no data collection on how many refugee women have suffered from violation. It is still difficult to measure the nature and extent of crimes of SGBV in camps, for reasons including shame, social stigma, honour killing, and fear of reprisal or the case going to trial. As a result, number of victims in need of professional medical assistance and psycho-social support do not have access to services (UNHCR, 1991; 2008; FIDH, 2012).

To break the social, cultural and traditional taboos on SGBV, public awareness and agenda-setting can be raised through discussion programmes on TV and radio, documentaries, films, public service announcement, columns, articles. High visibility of SGBV with the media could shape public opinion on the issue. For this reason, the present research attempts to reveal the sensitivity and the awareness level of UK national print media of SGBV against refugee women in Syrian refugee camps. First, however, SGBV itself and its expression with the Syrian refugee camps merits further introduction.

55
Sexual and Gender-Based Violence (SGBV) in Refugee Camps

SGBV is one of the world’s most widespread human rights violations (UN, 2013). The overwhelming majority of victims/survivors of SGBV are women and girls (UNHCR, 2003; Walby, 1990, p.132; Bastick et al, 2007). Here, interchangeable terms, such as sexual violence, gender-based violence and violence against women, signify physical, sexual and psychological harm that not only impacts on the individual but ultimately strengthens female subordination and extends male authority and control more widely (UNHCR, 2003). Such violence can thus be associated with the hierarchically structured unequal patriarchal gender relations between men and women (Walby, 1990, pp.142-143). Such inequality relations also help shape the types of SGBV experienced. According to classification within a UNHCR (2003) report, the most common forms are; sexual violence (rape, sexual abuse, sexual exploitation, forced prostitution and sexual harassment); physical violence (physical assault, trafficking in persons); emotional and psychological violence (abuse/humiliation); and harmful traditional practices (early marriage, forced marriage, dowry, polygamy, honour killing).

Yet, SGBV during intrastate and interstate conflicts, and in post-conflict, insurgency, natural disaster, flight, displacement refugee camp contexts. Vulnerability of women and girls is increased during or after all these conditions, where there is weakened control by public officials and other authority figures. Perpetrators can be gangs, civilians, bandits, border guards, humanitarian workers and even peacekeepers. (Butler, Gluch & Mitchell, 2007; Fowler, Dugan & Bolton, 2000; Laville, 2015).

Many initiatives have been launched by the UN and other international bodies that seen to eliminate SGBV. For example, The Convention on the Elimination of All Forms of Discrimination against Women (CEDAW, 1981), the United Nations Declaration on the Elimination of Violence against Women (1993), the Beijing Declaration and Platform for Action (1995) and The Rome Statute of the International Criminal Court (1998). The UN Security Council adopted Resolution 1325 on 31 October 2000, which for the first time, considered the effects of armed conflict on women and girls. The Resolution states: “all parties to armed conflict to take special measures to protect women and girls from gender-based violence, particularly rape and other forms of sexual abuse, and all other forms of violence in situations of armed conflict” (UN Security Council, 2000). Yet, whilst this resolution stresses the responsibility of all governments to protect girls and women from every kind of violence, a perception of relative impunity for actions of SGBV committed during conflict perpetuates a tolerance for such crimes against females; an ongoing ‘heritage’ of conflict or war (Bastick et al, 2007).

There is plenty of documented evidence of how women are faced with SGBV in refugee camps and how they become victims within the camps. This is not least borrowing statements given by women who have faced incidents of SGBV (Greenwood, 2013; Harper, 2014; Letsch, 2014; Mahmood, 2014). They highlight a number of key themes in respect of SGBV in the camps. For example, an important factor in the camps is how its internal geography affects the security of refugee women. Locations of basic facilities, such as wash facilities and latrines, are often at a distance from where women are camped, presenting risk zones for violence. Possible harassment at such facilities by men is a potential danger. Another factor that endangers female security is related to collecting food, fuel or water. Because of their gender roles, they typically have to cook and do housework for their children and spouse. Walking long distances from camp are times of vulnerability, where the women
may be raped, killed, and further abused by men. The food distribution process in the camps can also lead to enhanced masculine dominance over women. Thus, humanitarian workers, security forces or guards who are supposed to protect women, have been known to force them to give sexual favours in exchange for food or asylum hearings (Human Rights Watch, 2002; Hyndman, 2004; Freedman, 2007; Kreitzer, 2002; Callamard, 2002; UNHCR, 2006).

A second theme is how women often face domestic violence in refugee camps, which is rarely reported and usually remains hidden. This makes it difficult to intervene on behalf of the women concerned. Such violence mostly comes from husbands, fathers, mothers in law and other male and female family members. Thus, it is often regarded as a private matter. Contributing to the prevalence of domestic violence are stress and uncertainties, men’s loss of their traditional roles, cultural traditions, lack of resources, and general dissatisfaction (UNHCR, 2008; UN WOMEN, 2013).

Third, the physical situation of the refugee camps can also facilitate an increase in SGBV against women. Some camps, for instance, are overwhelmingly overcrowded and there is rarely enough room for every family. Therefore, different families and individual strangers share common shelter, where the accommodation is often too small and does not provide enough privacy. Living with strangers at the same place for a long time can result in harassment, abuse or sexual exploitation of single, divorced and widowed refugee women, for example.

As the fourth theme, the pressure to engage in prostitution, or the fear of denigration is an important factor that frequently threatens mainly single refugee women and girls who are unaccompanied. Here, gender-based violence can happen when refugee women are deprived of male protection (UNHCR, 1991; 2008), even when male relatives or others protect women and girls from strangers, they may exhibit another kind of gender-based violence, notably forced or early marriage. To protect girls from rape, sexual harassment, sexual abuse or trafficking, family members have forced their daughters in early marriage. (FIDH, 2012; Watt & Wintour, 2014; Save the Children, 2014).

Thus, in spite of all these UN and other international initiatives documents, SGBV still exists even in the refugee camps which should be the safest place, especially for women. According to Hyndman (2004, pp.199-200), “primary purpose of UNHCR gender policies is to promote women’s well-being and protection within the organisation, as well as in refugee camps and conflict zones. Yet, while vast improvements have occurred over the last decade, the implementation of UNHCR gender policies and projects aimed at protecting women in the 1990s remain incomplete”.

The Importance of Media Coverage

SGBV is thus both a chronic and acute issue for women resident in refugee camps. However, greater awareness of this terrible situation might hopefully change both governments’ and popular perceptions of these camps, feeding into new ways of governing and resourcing them. Most definitely, awareness is clearly required if any durable solutions are to be found to refugee crises. Yet, the evidence suggests that general awareness of life in the camps is very limited.

The media, in all its many guises as a powerful tool, has a very important role to play in changing or directing ideas, perceptions, attitudes or decisions about issues or situations. Not least, mass media such as TV, radio, internet, newspapers and magazines can powerfully
influence the agenda-setting process. The media has a powerful agenda-setting role, communicates to the public what and how to think about an issue (Cohen, 1963; McCombs, and Reynolds, 2008, pp.1-18). Yet, well known that whilst certain issues become newsworthy and widely available for public consumption, others are largely overlooked (Dearing & Rogers, 1996; Wood, 2009, p.274; McCombs & Reynolds, 2008, pp.1-18). Therefore, in the context of this paper, the public, NGOs and governments might well focus more on SGBV in Syrian refugee camps if the mass media carried the issue as a priority agenda item. Indeed, by “mediating, interpreting, critiquing, and/or facilitating images, we continue to realize how powerful a role media plays in warfare” (Fuller, 2010, p.69).

Media reports on SGBV in Syrian refugee camps can contribute in many ways. First of all, the public, NGOs and governments will become more aware of SGBV, its types, consequences and survivors’ conditions in camps. It will become more ‘visible’ on mass media as a problem of vulnerable and defenceless refugee women. Secondly, because in spite of the difficulties related to the data collection of SGBV, expressions of forced marriage, early marriage, pleasure marriage, forced prostitution, humiliation, domestic violence etc. are still observable in Syrian refugee camps (UN Women, 2013; The International Federation for Human Rights, 2013; El-Masri et al, 2013). Thus, more pressure by the media may than be put on policy makers for the protection of vulnerable refugee women in refugee camps, where the perpetrators are mostly unpunished. Third, media coverage of SGBV may also help to deconstruct any ‘normal’ ‘traditional’ or ‘cultural’ context which can contribute to the victimisation process of refugee women. Framing that early or forced marriage is not the ‘desired’ way to secure for daughters’ safety and security (The International Federation for Human Rights, 2013; UNHCR, 2014, p.8).

Additionally, if SGBV is seen as a human rights violation, it increases the duty on journalists to report this kind of crime. Certainly, SGBV should not be reported as a mundane event, with reporting statements of experts such as sociologists or psychologists also important for convincing the public of its unacceptability (Global Protection Cluster, 2013; The Ethical Journalism Initiative, 2009).

Methodology
The methodologies vary significantly in different studies such as gender, media or racism on account of the purposes of the research (Weiss & Wodak 2003, p.12). For this reasons, content analysis and feminist critical discourse analysis (FCDA) are used for this research. Using both analyses helped to see the results from a feminist perspective. Indeed, no method is feminist in nature; researcher makes the work feminist according to aim of the research. For example, content analysis is a study of texts, cultural products or non-living data forms (Leavy, 2007, pp.227-228).

In other words, content analysis is a research technique of documents and texts that focuses on the frequency of specific words. The use/choice of some words in media texts rather than others can be very important for revealing predilection of some events (Bryman, 2012). In sum, it helps the researcher to collect pre-existing data, such as newspapers, books, magazines, pictures, television programs etc. Looking at these documents from a feminist perspective, enables researchers to find statistically important data about gendered society (Leavy, 2007, pp. 227-228).
FCDA brings feminist studies and critical discourse analysis (CDA) together (Lazar, 2007). First of all, feminist studies are critical in nature and expose gender relations, gender blindness and patriarchal society by documenting women’s lives, experiences and concerns. Its basic aim is to empower women, give voice to them and apply their findings in the task of upholding social change and social justice (Sarantakos, 2005, p.54; Brooks & Hesse-Biber, 2007, p.4).

However, cornerstones of CDA are ideology, power and discourse. For CDA, unequal power relations are maintained through ideology and discourse. As a relation of differences, power is about the effects of differences in society (Weiss & Wodak, 2003, p.13, 15). Van Dijk calls it ‘abuse of power’ which results in social inequalities and injustice (2008, p.1). As regards discourse, it reproduces unequal power relations between social classes, genders, and ethnic/cultural majorities and minorities (Fairclough & Wodak, 1997, p. 258).

For this research, FCDA intends to show how gender, unequal power relations between men and women, patriarchal ideology and its violence and hegemonic power relations in Syrian refugee camps reflect on UK print media. Therefore, SGBV is a key term for this research according to classification of UNHRC report 2003. The reason of choosing the categories of UNHRC report is that it presents basic, comprehensive, and most common forms of SGBV. These classification includes sexual violence (rape, sexual abuse, sexual exploitation, forced prostitution, sexual harassment), physical violence (physical assault, trafficking), emotional and psychological violence (abuse/humiliation), harmful traditional practices (early marriage, forced marriage, honour killing, denial of education for girls or women) (UNHRC, 2003). Thus, the research question of this article; “To what extent daily national UK print media pay attention to SGBV against Syrian refugee women in Syrian refugee camps?” has been analysed according to FCDA.

Sample
The research aimed to reveal the sensitivity and awareness level of a selection of the daily national UK print media of SGBV. Media coverage of Syrian refugee camps is taken as the specific example. Five major daily national newspapers of the UK, Guardian (left-leaning social-liberal), Independent (centre-left), Daily Telegraph (conservative), Times (centre-right) and Sun (conservative) (BBC, 2009) were taken for research purposes.¹

Analysis
The scanning of the five major, above mentioned daily national newspapers of the UK published between March 15, 2011, and December 15, 2014 yielded 381 news reports on Syrian refugee camps, yet only nine of them were about SGBV in refugee camps. One of them was in The Independent, one of them was in The Daily Telegraph, and seven of them were in The Guardian. Therefore, only nine news were analysed and coded for this research.

¹ Total weekly readers; Guardian has 793,000 (50.3% men and 48.0 % women), Independent has 309,000 (66.3% men and 33.7 % women), Daily Telegraph has 1,313,000 (49.3% men and 50.7 % women) Times has 1,155,000 (58.4% men and 41.6 % women) Sun has 5,685,000 (57.6 % men and 42.3 % women) (Media UK 2014; National Readers Survey 2014).
The Times and The Sun made no reports on SGBV. In 2011 and 2012 none of the five newspapers reported on SGBV. The Daily Telegraph was the first newspaper which paid attention to SGBV against Syrian refugee women in refugee camps in 2013. In 2013 and 2014 The Guardian and Daily Telegraphy started to make news on SGBV against Syrian refugee women in refugee camps. The news was mostly on sexual violence, physical violence and harmful traditional practices. Between 2013 and 2014 most frequency words of sexual violence mentioned in The Guardian, Daily Telegraphy, Independent, Times and Sun (Figure 1).

Figure 1 word frequency forms of SGBV in The Guardian, Daily Telegraphy, Times, Sun and Independent.

**Findings - Sexual Violence**

Sexual violence is a form of gender-based violence that results in physical, psychological and emotional harm refers to any action, attempt or threat of a sexual nature of the victim. Therefore, consequences of all these harms reinforce female subordination and perpetuate male power and control (UNHCR, 2003). For example, rape is one of the forms of sexual violence defined as, the unwanted act or physical force against any part of the body of the
victim with a sexual organ or genital opening of the victim with any object (International Criminal Court, 1998). Its legal definition might vary in different countries.

According to Greenwood (2013), the UN and aid workers reported a number of sexual assaults, rampant sexual exploitation, domestic violence and rape outside the conflict, in camps or in host communities. Syrian refugee women are facing the same problems as well. However, sexual violence experienced by Syrian women and girls remains hidden mostly. So, it makes it difficult for a comprehensive data collection of SGBV. It may have many reasons why victim/survivor cannot speak it openly or report. For example, she may be afraid of honour killing, social isolation, outcast, or stigmatized of her community, family and society. As a result, the impunity contributes to further violence and creates new victims/survivors. The word “victim” or “survivor” refers to a person who has suffered from SGBV. However, reporters should be very careful when reporting victim or survivor terms. When seeking legal redress the victim term is used but in non-legal situations it can imply weakness and stigmatization (UNHCR, 2003).

“Rape and domestic violence follow Syrian women into refugee camps. Victims hide their shame to avoid being stigmatized for life after assaults by marauding gangs […] Dr Manal Tahtamouni […] in Za’atari refugee camp. When asked, she says, most women will not admit to being raped. They will say they have seen others being raped. This is a conservative area. If you have been raped, you wouldn't talk openly about it because you would be stigmatized for your entire life. The phenomenon is massively under-reported. Only after a long process of building trust through one-on-one counselling sessions might a rape survivor talk” (Greenwood, 2013).

Another kind of sexual violence that refugee women come across in camps is sexual abuse. They are mostly abused under the name of polygamy. Some Muslim men exploit the meaning of al-Nisa verse in Holy Koran2 which allows men to marry up to four women to guarantee their safety and protection especially during war. However, in modern society, legal rights are for civil marriage which exists solely between a man and a woman. In this case, second, third or fourth wives which are called kuma have no legal protection as a wife and increases the vulnerability of women.

“Syria's refugees: fears of abuse grow as Turkish men snap up wives. Increasing number of women who have fled conflict are opting to marry Turks, many as second, third or even fourth wives […] Turkish human rights groups warn that polygamy, outlawed in Turkey almost a century ago but still practiced in conservative rural areas in south-eastern Anatolia, is on the rise. Second, third, or even fourth wives – called kuma in Turkish – lack legal protection and are especially vulnerable to abuse” (Letch, 2014).

Syrian refugee women are not only abused, they are also sexually exploited by men. There are many reasons of sexual exploitation such as unequal power relations, vulnerability, and economic problems (UNHCR, 2003). Hence, in this flawed social structures that bear unequal power relations, while women are highlighted as vulnerable victims, men are stated

---

2 “Marry women of your choice, two, or three, or four; But if ye fear that ye shall not be able to deal justly (with them), then only one” (4:3, translated by Yusuf Ali, 2004, p. 184).
as perpetrators. “Syrian women in Jordan [are] at risk of sexual exploitation at refugee camps. Vulnerable young Syrian women are being sold into marriage, trafficked and exploited by predatory men, say aid workers” (Harper, 2014).

Sexual harassment is another form of violence that Syrian refugee women encounter, particularly widowed women, young girls or single women. They become more vulnerable and defenceless without a male partner. It is mostly in the form of unwanted verbal or physical sexual actions and demands for favours (UNHCR, 2003). If a refugee woman is head of the family, she may be exposed to harassment by aid workers for favours during food distribution, which also translates into harassment or inappropriate behaviours to women by men due to the access distance of public latrines.

“[…] even Abu Hussein, a local boss of Zaatari's brothel and bar district, has requested that UN officials launch patrols to control gangs of young men wreaking havoc in the camp and harassing women. Groping and lewd name-calling during food distributions and in the public latrines are common.” (Greenwood, 2013).

“Syria's female refugees [are] facing poverty, harassment and isolation. Women are the sole providers for one in four Syrian refugee families, struggling to provide food and shelter for their children and often facing harassment, humiliation and isolation, according to a report from the UNHCR (Sherwood, 2014).

Unfortunately one of the sexual violence aspects that vulnerable refugee women face is forced prostitution. It is in the form of forced sex trade in exchange for material resources and services (UNHCR, 2003). “[…] Syrian women and girls, some as young as 14 years old, are being 'sold' into forced marriages or prostitution after becoming refugees, aid workers and religious charities have said” (Sherlock and Malouf, 2013).

Findings - Physical Violence
The number of refugee women are also a target of such violence, which includes physical assault, trafficking and domestic violence. Vulnerable refugee women may be forced or physically abused in camps for sexual activity in favour of some goods, money, service, protection, or refugee statue.

“[…] More overt prostitution is also common among Syrian refugees said Wissam, a Jordanian resident who knows people involved in the trade: There is a women who acts like an agent, bringing the girls from the camps. The normal cost for one hour with a Syrian girl is 50JD, but if she only recently lost her virginity then you pay 100JD. One French aid worker inside Zataari camp said a woman in the camp regularly offers girls to the camp's security guards […] The Daily Telegraph followed Wissam as he posed as a client interested in marrying a girl: I want a cheap Syrian girl, said Wissam, with his phone on loudspeaker. In Zarqa we have married 16 for a dowry cost of 2000JD, came the reply. The men proceeded to bargain, with Wissam quoting lower figures than he said he had been offered in other camps. "Before the revolution it cost several times that sum to marry a Syrian girl. Now it has become the running joke in Jordan that if you are running low on cash or finding it hard to get
married, you should marry a Syrian girl," said Wissam. It has become a
business transaction” (Sherlock & Malouf, 2013).

In the item, commodification of Syrian refugee women’s and girls’ bodies is
emphasised by the words such as prostitution, trade (trafficking), cost for one hour, virginity,
offering girls, cheap girl, dowry, running joke, business transaction. Trafficking in the refugee
camps is not always involved with men sometimes it involves women who act as an agent.
She brings the girls offered to a man who pays the money. Her lost chastity or not increases or
lowers her cost. The words “cheap Syrian girls” indicates the vulnerability of girls and it is
clear that women or girls become the real victims of conflict.

Domestic violence also occurs in camps, which keeps women subordinate to men
(fathers, stepfathers, grandfathers, brothers and uncles as perpetrators) or other female
member (mothers-in-law and daughters-in-law) of the family (UNHCR 2003). Within the
unequal power relations females are the real victims of domestic violence. “[…] Dr Manal
Tahtamouni […] was among the first to open a women's clinic in Zaatari refugee camp. Of
the 300 to 400 cases her clinics receive in a day, 100 are female victims of violence, mostly
domestic” (Greenwood, 2013).

Findings - Emotional and Psychological Violence

Emotional and psychological violence is a kind of non-physical violence that damages the
dignity of female victims. Manipulative men victimise refugee women by lowering their self-
esteeem, self-respect, ability, self-confidence and self-sufficiency.

“[…] it was a big shock when an old Jordanian man came to my mother's tent
asking for her hand. He said that he wanted to provide her with a better life and
spare her humiliation. These Jordanians are really exploiting Syrian refugees’
terrible circumstances.

An acquaintance in a nearby tent had an 18-year-old nephew, Omer, who worked
in an embroidering workshop. She told him about our daughter, came to our tent
and told us she wanted Rulla (13 years) for her nephew. Rulla blushed in
astonishment. For me, it was hard to accept the idea. She was still a child, playing
with kids in the camp. But the war, hunger, humiliation and fear forced me in the
end to accept the offer. It was difficult to throw my daughter into a new life I do
not know and she herself does not know either. Rulla knew nothing about
marriage; I had to teach her every single thing” (Mahmood, 2014).

“[…] my husband is old and not well, and my sons are little boys […] two sons
and five daughters there is no one to protect us… The tents are too close to each
other; young men would pass by and stare at our tent” (Mahmood, 2014).

As understood from the testimony of a Syrian refuge woman, she was faced with two
problems; war and hunger from one side, and humiliation by men from the other. The old
Jordanian man abused the mother by implying that they are weak, need a man to protect and
provide a better life. She has no male support from neither from her husband nor sons. In this
situation, the inability of her husband and humiliation from men in the camp forced her to
make her daughters marry. The mother admits that her daughter Rulla is too young for
marriage, but the risk of rape or kidnap seems a proper justification, why they made the
daughter become a child bride, for the mother in these circumstances. Beyond the physical
consequences of these risks, the humiliation in the society, which might be caused by rape of the daughter and the inability of the mother to prevent it, lays a heavier burden on the shoulders of the mother.

In a similar manner, adult male figure is regarded as a protection and guarantee for women in refugee camps. Thus, marriage leads to the idea that male power might protect women as a humiliated and weak figure in the society from rape, sexual abuse or humiliation. For this reason child marriage is an inevitable reality in refugee camps.

Findings - Harmful Traditional Practices

Some cultural and traditional practices reinforce the inferior situation of women such as early marriage, forced marriage, honour killing, dowry, temporary marriage and polygamy. Sometimes unexpected situations like conflict, war or turmoil may lead these practices to be a necessity to prevent women from rape, abuse, humiliation and trafficking. For example, forced marriage is an arranged marriage, which is decided between the family members of the girl and the boy/man. Mostly dowries are paid to the family of the girl and she has no other choice when she refuses, there could be violent and/or abusive consequences (UNHCR, 2003).

Forced marriage is one of the biggest problems that Syrian refugee females are facing. The Guardian, of 8th Sept, 2014, giving headline showing the awareness and summarizes the situation, “Britain to tackle big rise in Syrian refugee girls forced to marry. UNICEF figures show one in five girls, some under 10, forced to marry by parents to protect against sexual violence” (Watt & Wintour, 2014).

“[…] Maha, 13, said: "My father forced me to get married because he heard about a rape case nearby. He was scared the same would happen to my sister and me ... I would've liked to finish my studies, but I couldn't do that” (Anderson, 2014).

“Child marriage soars among Syrian refugees in Jordan. Yasmine, a 16-year-old Syrian refugee who lives in a camp in Jordan, told UNICEF she married a 24-year-old man nine months ago. She is five months pregnant. "When I was younger I was dreaming about being a fashion designer, but now I can't achieve that because of my situation,” she said (Anderson, 2014).

“Syrian mother's agony: why I made my teenage daughter become a child bride. Mothers explain why they pushed their girls into marrying older men to protect them from rape and kidnap. Most marriages in the Zaatari camp are for girls of 12, 13 or 14, but even 10-year-olds might get engaged if they are tall and developed” (Mahmood, 2014).

Many more stories could be heard about early marriage from the voices of Syrian refugees. One of the harmful traditional practices of early marriage is a common experience for Syrian girls. Parents force their daughters to marry a man that she has never seen before. Grooms are sometimes as old as girl’s fathers or grandfathers. The only idea in the parents mind is marry off their daughter which makes them more vulnerable to abuse. Men, from outside or in the camp, exploit the situation. As “The imam, speaking on [...] the men come into the camp and [...] they are just buying girls” (Harper, 2014). The man is trying to buy a young girl as young as he can. This so-called marriage under the name of dowry results another kind of violence such as domestic violence.

64
Because of their age, child brides do not know how to behave toward their husband, kids or mother-in-laws, and to maintain a household. They have only two choices, one of them is to bear it as long as they can, and the other one is to divorce. However, divorce is the last solution because it stated as shame of the girl and the family, so in most cases it does not seem a reasonable or possible solution. At the same time, early marriage has another undesired result for child brides. First of all they have to give up their education, desired jobs and dreams after marriage. Because of gender roles, she has to take of the household as a woman, look after the kids as a mother, and satisfy her husband as a wife.

“[…] Three days after the wedding, I went to see Dima in her new home to find out how she was. [...] she told me in broken words that she could not have any sleep in the same bed as a strange man. She pleaded with me to take her home and let her go back to school [...] Then my son-in-law came to tell me it was hard to put up with Dima's stubbornness and childlike demeanour. [...] Soon afterwards, Hassan came to me infuriated. He complained Dima was not obeying him and they were fighting all the time [...] after less than two months, Hassan dropped her at my house and said to me: "I have divorced your daughter, she can't be a wife for me anymore. I will look for another woman." [...] Dima refused to go back to school. She did not want to mingle with people anymore. She was too bashful and ashamed to tell her friends she was divorced. She was broken and lost her avidity for reading. All she wants is to be left alone" (Mahmood, 2014).

Another harmful traditional practice dowry, which is for the guarantee of the bride's security, becomes payment for sex in reality. In this regard a certain number of Syrian refugee girls' bodies are commodified in terms of mut'a nikah. Although mut'a nikah as an allegedly quite limited practice confined to certain groups or sects is forbidden by (sunni) orthodox Islamic Law, it remains a sensitive area of Islamic debate and has historical roots pre-Islamic Arabic society (Esposito 2003). Men just exploit young girls in the name of mut’a. It is an agreement for marriage between a man and a woman for a period of time. During this contract period, man pays wage to woman in exchange for sexual relations. When the duration of contract finishes, woman is allowed to make another mut’a after forty-five-day waiting period which is called 'idda (Ruffle, 2011).

“[…] In Jordan, hundreds of Syrian females have been affected by an informal trade that has sprung up since the start of the war in Syria, where men use "agents" to source Syrian refugees to use for sex. Often this is done under the guise of "marriage": The 'dowry', which in Muslim society is traditionally paid by the groom as a guarantee of the bride's security has become a payment for sex. And the "marriage", is an affair that lasts only a few days or even hours. "We realised these were Mut'ah or 'pleasure marriages',' said Ziyad Hamad, whose charity, Kitab al Sunna, is one of the largest organisations working with Syrian refugees in Jordan. "It is a fake marriage; they use handwritten documents that are not registered by a Shiekh [religious leader]. Men travelled from Saudi Arabia and other countries to marry girls in the camps. They would pay rent for a home outside the camp and tell the women they would support them. Then they would have sex with them and divorce them one week later” (Sherlock & Malouf, 2013).

Honour killing is another form of harmful traditional practices. The reason of honour killing is that rape of a girl/woman is perceived to bring shame, dishonour upon her family.
Unfortunately, victims/survivors of sexual violence do not report such crimes due to fears of social isolation, re-victimization or being the victim of honour killing. Honour killing takes place when a girl/woman, is killed by her male relatives, generally a husband, father, brother or uncle, but sometimes a female relative (Bastick et al, 2007, p.129).

“[…] my daughters were a huge burden to me. I never thought I would think of them like that. I was so glad when they born. You can't imagine the fear of a mother when she looks at her daughter and thinks she might be raped at any moment. It is horrible to think if the rape story became known publicly, her uncles would kill her immediately. I felt like dying when I thought of that moment” (Mahmood, 2014).

Parents are mostly terrified of sexual violence against their daughters. For this reason, mother stated that her daughters are huge burden for her. She is afraid of honour killing of her uncles if the rape case occurs.

Polygamy or kuma at traditional meaning which girls/women illegally become second, third partner of men. It is one of the most common practices among Syrian refugees. For example, “[…] Hanan, 45, says her 23-year-old daughter will become the second wife of a 35-year-old Turk. He promised to do the house and his car in her name. She will be better off that way” (Letch, 2014). “[…] Men are coming here to take young girls as second wives. It is under the pretext of being charitable, of helping us” (Sherlock & Malouf, 2013). As it is understood from the previous reports and news on polygamy, men from various countries are coming to take girls from the refugee camps. They are just abusing the vulnerable situation of young girls in pretext of being a good husband. They mostly offer dowry or promise a house to her or her parents.

As revealed from the headlines and items reported from The Guardian and The Daily Telegraph newspapers, refugee camps for Syrian refugee women are not always safe places for them to live. They are vulnerable to SGBV at camps. First of all, parents are afraid of their daughters or other female relatives being raped. That is the reason of forcing their daughters for marriage with a man that they have never seen. The idea is that power of a male partner would protect girls from being a victim of rape. She will be the property of one man that nobody could touch.

In a conservative society a rape victim is considered as dirty because of the patriarchal request on the pureness of women’s bodies protected through governing their sexuality. The Muslim and other conservative societies pride themselves on the virginity of their women/girls as a source of honour/morality for their families and community (Zabeida, 2010, p.21). That is one of the reasons of early and forced marriage is so common among young Syrian refugee girls.

Conclusions
News published in five daily major UK national newspapers (Guardian, Independent, Daily Telegraph, Times and Sun) referencing SGBV in Syrian refugee camps have been analysed to show how much they are sensitive and aware of the situation. Results show that only nine article news (The Independent has one, The Daily Telegraph has one, and The Guardian has seven) were about the SGBV in refugee camps.
According to nine press media coverage; the most common forms of SGBV at Syrian refugee camps are forced marriage, early marriage, dowry and polygamy. One of the reasons these things occur is that parents are afraid of their young daughters being raped or sexually abused at the camps, which brings shame to the family. So, parents force their daughters to marry in favour of dowry or protection. Among poor Syrian refugees, their daughters’ bodies are the only properties they have. In this way, child brides become the victims of forced marriage, early marriage, pleasure marriage, domestic violence, polygamy, sexual abuse, and trafficking. It is not surprising that these women and young girls suffer from masculinity in patriarchal society. Their bodies became commodity in the hands of men in exchange of favour. Hence, the most frequently mentioned words related to refugee women discourses at refugee camps are, afraid, scare, victim/survivor, at risk, in danger, isolation, shame, weak, morality, honour, vulnerable, submission, femininity, passive, defenceless, dependent and alone.

In this regard, SGBV can be seen as facilitator of a vicious circle. For instance, economic motivation of dowry leads parent child marriages, and child bride who does not know how to take care of household or look after kids would be a victim of domestic violence or divorce. Moreover, end of education and lack of job opportunities of refugee girls create another form of abuse. In sum, results show that the attitude of the UK national print media coverage of SGBV against Syrian refugee women in refugee camps is limited. Gender and violence perspectives of the refugee dilemma are mostly ignored. Reports mainly focus on refugees' displacement, resettlement, vulnerability, and their numbers in these camps.

As regards ‘Limitations and Future Research’, there is no data collection or reports to prove how many refugee women have been suffered from violation in Syrian refugee camp (UNHCR, 1991, 2008; FIDH, 2012). Therefore, it was difficult to compare the media coverage with virtual SGBV cases in camps. Also, the sample consisted this study is confined to U.K national print media. Further research is recommended to discover why media coverage is so limited and why they do not pay enough attention to SGBV in camps.

Book Review - Omar Imady:

Lil-Tarikh wa-al-Dhikra, Qisat Jihad wa-‘Umur

(For History and Memory, the Story of a Struggle and a Life)
By Badr Deen Al Challah (Damascus, 1990)
In 729 pages permeated with memories, speeches, personal letters, photographs, travel journals, and insights on everything from Syria’s politics to Syria’s agriculture, Al Challah succeeds in producing a work, which mirrors the person one would encounter in real life. For those who have had the opportunity to meet Al Challah, as I have on several occasions, you cannot help but visualise him sharing fragments of this book over tea at his farm in the Ghuta. Al Challah loved to talk. It was a gift that his listeners, regardless of their background, appreciated. I have watched him impress my American grandmother just as I have watched him impress hard core Baathists. There was something endearing about his willingness to share everything, regardless how personal or even embarrassing, and all this comes out clearly in his memoirs. Al Challah was born in 1905, when Damascus was still very much an Ottoman city. His father, Haj Salim Challah was a well-known merchant of fruits and vegetables based in Damascus, but with a regional network that covered cities in Palestine, Lebanon, Egypt, Iraq and Hijaz. Guided by his father, Badr Deen, along with his brother Shafiq, entered the world of entrepreneurship at a young age and learned carefully the delicate art of buying, selling and investing, first under Ottoman rule and subsequently under the French Mandate. His father was a notable Free Mason, who appears to have had ties with the anti-Ottoman Arab movement in the period prior to World War I. His clandestine support to the rebels may have been the reason he was exiled for a short period to Ankara. Badr Deen, too, would join the Free Masons, and despite the fact that freemasonry after the 1940s had become branded in popular Arab perception as a ‘tool of Zionism’, Badr Deen is not embarrassed of his association with freemasonry and in fact includes a picture of himself in full Masonic regalia.

Perhaps the most significant part of Al Challah’s memoirs (to those interested in Syria’s recent political history) are those segments which focus on his relationship with President Hafez al-Asad. It is here that we encounter first hand that distinct Damascene sensibility, which had come to terms with the fact that because of the Alawite control of the army (from the late 1960s onwards) they will either be ruled by the extreme leftist branch of the Baath party (headed by Salah Jadid), which made clear its hostility to everything Damascus cherished, or by the more moderate branch headed by the pragmatist Hafez al-Asad. None of this is articulated bluntly, however, it is not difficult to understand that what Al Challah is in essence saying is that he had succeeded in impressing this Alawite general who came from a rural background. Not only did he manage to impress him, but most importantly, he managed to gain his trust; and that he did all this because he wanted to continue to be a successful merchant, who contributes to his country’s development and progress. Al Challah makes no reference to the events of the 1980s and his instrumental role in convincing Damascene merchants to not join in the boycott that was called for by the Muslim Brotherhood. But in describing the various projects that he continued to embark on, and the various charities that he continued to fund throughout the 1980s, he in essence confirms the point that what he did was the wise thing to do, at least from the perspective of a Damascene merchant. He would confide to his close visitors that in his mind, his ‘wise approach’ had succeeded in protecting Damascus from a similar fate to that of Hama.

Though Al Challah covers several important conferences that he participated in and documents the visit of President Carter to his farm in 1987, the best parts of his memoirs, the
ones in which he seems entirely un-inhibited and flowing with eloquence are those in which he describes his travels, from his trip to the UK in 1954 and all the way to his trip to China in 1981. In his UK trip, he visits his son Rateb (who later becomes the President of the Chamber of Commerce) in Oxford and visits Manchester, Leeds and the lake District, in addition of course to London; all the while documenting the smallest details (from how much he paid for his hotel room in London, 20 shillings, to meeting Nizar Kabani, who at the time was a diplomat stationed at the Syrian Embassy in London, to the various Syrian families he met in Manchester).

Al Challah concludes his memoirs with a paragraph printed in bold in which he expresses his grave concern for the future of the Arab world. He wrote this is August 1990 right after the Iraqi invasion of Kuwait. He besieges God to guide Arab leaders to interact wisely with this crisis that they may be protected from death and destruction. One cannot help but wonder what he would have said had he lived to see the hundreds of thousands killed, the millions injured and displaced. A country dismembered and violated from land and air. Would he have regretted his alliance or would he have blamed his countrymen for not holding on to the path of wisdom that he believed himself to have pursued?
About Our Authors

Jörg Michael Dostal is an Associate Professor in the Graduate School of Public Administration, Seoul National University, Korea and a Senior Fellow, Centre for Syrian Studies, University of St. Andrews. He holds degrees from NUI Galway, FU Berlin and the University of Bath and obtained his doctorate from the University of Oxford. He is the co-author of 'Syria and the Euro-Mediterranean Relationship', St Andrews Papers on Contemporary Syria (Lynne Rienner, 2008) and of ‘Analyzing the domestic and international conflict in Syria: Are there lessons from political science’ (Syria Studies, 2014).

Özlem Özdemir is post-doctoral researcher at Swansea University, College of Science, Department of Geography. She did her undergraduate at Ankara University, Faculty of Communication, Department of Public Relations and Publicity. She received her Master from Ankara University, Institute of Social Sciences, Department of Public Relations and Publicity, and PhD from Akdeniz University, Institute of Social Sciences, Faculty of Communication. She was an academic visitor at Swansea University, Political and Cultural Studies, College of Arts and Humanities during her PhD in 2014.

Omar Imady obtained his doctorate in Middle Eastern Studies from the University of Pennsylvania. His professional experience combines practical fieldwork in Syria as a UN officer and consultant; academic experience, as an Associate Professor of Middle East Studies; and managerial experience, as Dean of academic programs at the New York Institute of Technology in Jordan. Imady is the author of various studies and UN reports on Syria. He is also a published poet and novelist and his works have been translated into several languages. Presently, Imady is a Senior Fellow at the Centre for Syrian Studies, University of St Andrews.
